SEMIOTICS, ANALOGICAL LEGAL REASONING, AND THE Cf. CITATION: GETTING OUR SIGNALS UNCROSSED

IRA P. ROBBINS†

ABSTRACT

The Bluebook's introductory citation signals are essential to effective legal discourse. The choice of signal can influence not only the interpretation of cited cases, but also the path of the law. In this Article, Professor Ira Robbins examines one commonly used signal: the cf. After exploring its semiotic function, he details the multitude of ways in which this signal has been used and misused. He argues that lawyers' and judges' careless use of the cf. leads to confusing and often incoherent developments in the law, and concludes by proposing a precise working definition for this irksome, but potentially powerful, citation signal.

INTRODUCTION

Legal writers often complain about the form of legal discourse to the point where seemingly inconsequential esoterica receive the passionate scrutiny of the well-intentioned analyst.1 But introductory signals—which may be the epitome of form—draw considerable fire for good reason: they are often poorly defined, prompting both inconsistent usage and great confusion.2

2. Judicial opinions refer to The Bluebook rules regarding introductory signals more than to any other citation rules. See A. This Article analyzes selected
While their definitions may be poor, however, introductory signals clearly serve two major purposes: they "indicate the purposes for which the citations are made and the degree of support the citations give." Other meanings may exist, of course. For example, two authors have suggested that academic legal citation also fulfills the obligation to indicate familiarity with certain authorities and may signal a group identity or theoretical perspective. Another commentator has sought to determine whether judicial citation seeks primarily to justify certain results rather than to explain the actual reasoning behind decisions. Alternatively, perhaps we simply expect too much from legal citation signals.

One attribute of introductory signals is paramount: in subtle and sometimes not-so-subtle ways, they help to determine the future direction of the law. Thus, to the extent that the signals are defined

incorrectly or used imprecisely, they affect the analogical reasoning process that is at the foundation of common law jurisprudence.

While there are numerous introductory citation signals—many susceptible to broad criticisms and that merit further analysis—this Article focuses on the cf. signal. Because it is the weakest of the citation signals that indicate support (according to The Bluebook), it is the most intellectually challenging one. It is also the least well understood signal; thus, it is in the greatest need of increased precision.

Lambrix v. Singletary, a recent Supreme Court opinion, demonstrates the potential ramifications of citing a case with the cf. signal. Capital prisoner Cary Michael Lambrix’s death sentence hung on the interpretation of the cf. The case presented the question whether Lambrix could successfully challenge his sentence because the aggravating factors considered by the jury were later ruled

7. This Article focuses on the cf. signal. However, the see signal could also use further analysis, as several decisions demonstrate. Compare Schmidt v. McCarthy, 369 F.2d 176, 182 n.18 (D.C. Cir. 1965) (noting the court’s use of the see signal in Milone v. English, 306 F.2d 814 (D.C. Cir. 1962), and explaining that it was used “to indicate that ‘the asserted opinion or conclusion will be suggested by an examination of the cited authority’” (quoting A Uniform System of Citation 27:2:3 (Columbia Law Review Ass’n et al. eds., 10th ed. 1958) [hereinafter BLUEBOOK TEN]) with National Org. for Women, Inc. v. Scheidler, 897 F. Supp. 1047, 1062 n.14 (N.D. Ill. 1995). In Scheidler, the court stated that “this court need not follow the letter of the Seventh Circuit’s ruling and assume, without analysis, that section 1367 applies because of the ‘see’ signal.” Id. at 1062 n.14. It interpreted the see signal as “directing the reader’s attention to the statute to show the general legal theory supporting its conclusion that the counts were to be reinstated.” Id.

Scheidler points up another problem with changing definitions of signals. In one edition of The Bluebook, the see signal may be used to suggest an inferential step between the authority and the proposition offered, while [no signal] is used to introduce “on point” authority. See BLUEBOOK TEN, supra, 27:2. By contrast, the sixteenth edition uses see to show direct support while reserving [no signal] to identify sources or attribute quotes. See BLUEBOOK SIXTEEN, supra note 3, Rule 1.2(a). In Scheidler, the district court interpreted see as indirect support akin to see generally. See Scheidler, 897 F. Supp at 1062; see also Beaney, 271 F. Supp. at 696; State v. Oltmanns, 519 N.W.2d 602, 606 (S.D. 1994) (Henderson, J., concurring) (criticizing the majority’s use of compare to give more weight to a dissent than it merited).

The change regarding the see signal alone ought to prompt considerable controversy, for not only can evolving definitions lead to confusion in interpretation of signal use, see Donald H. Gjerdingen, A Uniform System of Citation, 4 WM. MITCHELL L. REV. 499, 510 (1978) (reviewing A Uniform System of Citation (Columbia Law Review Ass’n et al. eds., 12th ed. 1976)) (“The tragedy is that one edition’s signals are meaningless to a person schooled in a different edition.”), but also the new use of the see signal may not be an improvement over earlier uses.

unconstitutional in a different case. Eight years before Lambrix, the Court's general holding in Teague v. Lane had forbidden retroactive application of "new" constitutional rules of criminal procedure to final convictions on collateral review. The Lambrix Court decided that its later ruling in Espinosa v. Florida was not available to Lambrix because it was a new rule not dictated by existing precedent and the Constitution at the time his conviction became final. Emphasizing that Espinosa's conclusion was not compelled by extant precedent, Justice Scalia observed:

The [Espinosa] opinion cited only a single case, Baldwin v. Alabama, 472 U.S. 372, 382 (1985), in support of its central conclusion that indirect weighing of an invalid aggravator "creates the same potential for arbitrariness" as direct weighing of an invalid aggravator. And it introduced that lone citation with a "cf."—an introductory signal which shows authority that supports the point in dictum or by analogy, not one that "controls" or "dictates" the result.

Baldwin, however, arguably did establish that the Court's ruling in Espinosa was not an unprecedented leap of reason. Curiously, neither of the two Lambrix dissents defended the citation to Baldwin. The fact that Espinosa introduced Baldwin with a cf. signal helps explain why the Lambrix majority failed to analyze potentially contradictory Supreme Court statements concerning the novelty of the principle it propounded. As exemplified in Lambrix, cf. citations are frequently used but rarely, if ever, explained. Moreover, they are often viewed with skepticism. One observer has even speculated that

legal writers use the cf. signal when they wish to impress the reader with the breadth of their research.\textsuperscript{17} For those who have not read or had experience with the citation rules, the process of interpreting such carelessly used citations can be either exasperating or completely cryptic.\textsuperscript{18} Expert legal writers often fare no better, and many have found fault with the use and misuse of the cf. signal.\textsuperscript{19} Eminent jurist Robert Bork, for example, offered the following reprobation: “As the majority presumably recognized, since it cited [a prior decision] with a cf., the case is probably inapposite.”\textsuperscript{20} What, then, is the true value of the cf. signal? This Article attempts to answer that question from a semiotic perspective, examining how the cf. signal may operate in both theory and practice.

In Part I, this Article presents a history of the meaning and use of the cf. signal, with particular reference to semiotics as a theoretical construct through which to evaluate it. Part II takes this theoretical construct and applies it to a variety of judicial decisions that use and analyze the cf. citation. In addition, Part II highlights the spectrum of cf. decisions, and the implications of the ambiguity and contradiction in the use of this signal. Finally, Part III integrates theory and judicial practice and proposes an approach to cf. usage that should lead to greater clarity and understanding.

I. SEMIOTICS, THE ROLE OF SIGNALS, AND THE CF. CITATION: HAZY DEFINITIONS, CLEAR FUNCTIONS

A. Analogical Reasoning and the Problem of Cf. Definition

Few readers of law journals require an education in the meaning of reasoning by analogy. Both law students and judges (as well as many lawyers) engage in the process daily. Suffice it to say for present purposes, therefore, that, in every case necessitating the application of law to fact, the judge must determine the extent to which existing precedent governs the instant case. If the court deems the precedent to be "close," the court will treat the precedent either as controlling or as influential and apply it to the case accordingly. If, on the other hand, the court focuses on one or more factors to distinguish existing precedent, then the court will either have to find closer precedent or treat the case as one of first impression and formulate an appropriate rule of decision.

This notion of "closeness"—or degree of separation—is inherent in the process of analogical reasoning. Judges, through their opinions, move in interstitial ways. This notion of closeness is also inherent in legal citation practice, for introductory signals "indicate the purposes for which the citations are made and the degree of support the citations give." In this way, citation signals help to pave the path of the law. By helping to assign the degree of support and the strength of distinctions and reconciliations, they help to articulate the degree of departure from existing law. If the signposts are bad, so too may be the destination. We must therefore take utmost care to be true to the intended development of the law. Put differently, careless citation practice can lead to haphazard consequences that should be controlled to the extent desired and to the extent possible.

Despite the laudable goals of citation practice, the cf. signal is viewed with skepticism. One reason is that practical definitions and uses of the signal vary widely. The Bluebook authors explicitly grant

21. See, e.g., Southern Pac. Co. v. Jensen, 244 U.S. 205, 221 (1917) (Holmes, J., dissenting) (“I recognize without hesitation that judges do and must legislate, but they can do so only interstitially; they are confined from molar to molecular motions.”); BENJAMIN N. CARDOZO, THE NATURE OF THE JUDICIAL PROCESS 103 (1921) (“We must keep within those interstitial limits which precedent and custom and the long and silent and almost indefinable practice of other judges through the centuries of the common law have set to judge-made innovations.”).

22. BLUEBOOK SIXTEEN, supranote 3, Rule 1.
the cf. signal the terrain of analogical legal reasoning. Other writers implicitly do the same, reserving cf. for cited authorities that involve substantially different facts, or both. Black's Law Dictionary effectively portrays the cf. as a catchall for any point the author wishes to make. Cf. might be short for "cipher"—it is a nebulous introductory signal, practically devoid of meaning without further explanation by the author. Or cf. might simply mean "can't find": aware that a particular proposition requires support, the author, unable to locate anything close, just cites a book, article, or case that is "close enough."

Another reason that the cf. signal may attract criticism is that different generations of lawyers and authors remember it differently.

23. The authors of The Bluebook first made passing reference to analogical reasoning under the cf. signal more than forty years ago. See A Uniform System of Citation, Rule VIII[A][13(d)] (Columbia Law Review Ass'n et al. eds., 9th ed. 1955) (stating that the cf. signal should be used "before a case, statute, or secondary [authority] expressing a legal proposition which, while only analogous, lends some support for the statement, conclusion, or opinion of law in text").

24. See MILES O. PRICE & HARRY BITNER, EFFECTIVE LEGAL RESEARCH 389 (3d ed. 1969) ("Where the dictum, though deriving from substantially different facts, is sufficiently in point to be cited in the discussion, substitute italicized 'Cf.' for 'See.'"). The tenth edition of The Bluebook linked the cf. signal to authorities that discussed different facts and law, but the fact-related portion of its definition is particularly striking: "'Cf.,' rather than 'accord,' is appropriate whenever a factual distinction between the text and the authority is of such legal significance that the proposition of law must be materially different." BLUEBOOK TEN, supra note 7, Rule 27:2:4.

25. See Casey v. Transamerica Life Ins. & Annuity Co., 511 F.2d 577, 582 (7th Cir. 1975) (Pell, J., dissenting) (evaluating the use of a cf. citation to a similar factual situation analyzed under discrete law and stating that "[t]he case . . . is properly cited with a 'Cf.' reference because it is not[, like the present controversy,] a reinstatement case"); JOYCE J. GEORGE, JUDICIAL OPINION WRITING HANDBOOK 252 (3d ed. 1993) (defining cf. as "an abbreviation for confer which translates into 'compare' and indicates that while the material cited lends support to the proposition advanced, it is directed to another point"); see also Alaska v. Federal Energy Regulatory Comm'n, 980 F.2d 761, 763 (D.C. Cir. 1992) (approving cf. use where "[t]he theory underlying both decisions is the same").

26. See Lambrix v. Singletary, 520 U.S. 518, 529 (1997) (describing cf. as "an introductory signal which shows authority that supports the point in dictum or by analogy, not one that 'controls' or 'dictates' the result"); MILES O. PRICE, A PRACTICAL MANUAL OF STANDARD LEGAL CITATIONS 58 (1958) (employing a definition nearly identical to that present in PRICE & BITNER, supra note 24, at 389, with the exception of a parenthetical: "Where the dictum in a cited case, though deriving from substantially different facts (or the case is otherwise distinguishable from the situation being discussed), is sufficiently in point . . . .") (emphasis added).

27. See BLACK'S LAW DICTIONARY 229 (6th ed. 1990) (defining cf. as a signal that "[d]irects the reader's attention to another part of the work, to another volume, case, etc., where contrasted, analogous, or explanatory views or statements may be found").

28. See BLUEBOOK SIXTEEN, supra note 3, Rule 1.2(a) ("The citation's relevance will usually be clear to the reader only if it is explained.").
and therefore use it differently. The authors of The Bluebook altered its definition—albeit subtly—almost every time the manual was printed between 1947 and 1996.\textsuperscript{29} For example, the seventh edition of The Bluebook, printed in 1947, recommended the cf. signal when a case “is parallel to the proposition for which it is cited but contains facts materially different.”\textsuperscript{30} Eight years later, the ninth edition suggested using cf. “before a case, statute, or secondary [authority] expressing a legal proposition which, while only analogous, lends some support for the statement, conclusion, or opinion of law in text.”\textsuperscript{31} In 1958, the tenth edition made more extensive changes:

“Cf.” is used to introduce any authority which supports a statement, conclusion, or opinion of law different from that in text but sufficiently analogous to lend some support to the text. “Cf.” is never used to support a statement of fact.

“Cf.,” rather than “accord,” is appropriate whenever a factual distinction between the text and the authority is of such legal significance that the proposition of law must be materially different. “Cf.,” rather than “see,” is appropriate whenever the proposition supported by the authority is not relevant directly to that advanced by text but only analogous to it.\textsuperscript{32}

The eleventh edition included an only slightly reworded version of the first sentence contained in the tenth edition,\textsuperscript{33} and eliminated the second paragraph entirely. The thirteenth edition added a new sentence, one directly relevant to the present discussion: “The [cf.] citation’s relevance will usually be clear to the reader only if it is

explained." 34 The fifteenth edition then added a sentence that remains in the present sixteenth edition: "Parenthetical explanations, however brief, are therefore strongly recommended." 35

When the editors of The Bluebook modified the definition and usage of the cf. signal six times in thirty-nine years, 36 they may have inadvertently changed the common law as well. 37 Current judges apply contemporary signal definitions in construing older cases that employ signals whose definitions have changed, undoubtedly leading to confusion. This possibility is deeply disturbing because introductory signals arise out of the necessity of citing authority under the rule of law, as well as under The Bluebook. 38 Despite developments in legal criticism, 39 the precept that similar situations should receive similar judicial treatment retains obvious appeal. 40 Such treatment—the rule of law—is integral to the long-standing judicial doctrine of stare decisis, which obligates judges to follow prior decisions. Thus, a modern system of citation ought to insulate writers from accidental misinterpretation of citations and inoculate judges from accidental departures from previous judgments.

Moreover, despite the exhortation of the most recent version of The Bluebook, 41 cf. citations still go largely unexplained. Many courts

and legal writers fail to explain the purpose of their cf. citations. Thus, the reader—if he or she thinks about it at all—is left to wonder why the writer employed the cf. signal. Why was the cited primary or secondary authority viewed as positive support for the main proposition? Why was it viewed as less-than-direct support? Precisely how is the cited authority different from the main proposition? In short, what is the nexus between the authority and the proposition? Unless that connection is made clear, the judge or law clerk who later builds on or extrapolates from that elusive citation may move the law in unanticipated or unintended directions. This problem becomes especially acute as judicial caseloads and the corresponding number of published opinions continue to grow. The resulting pressure to decide more cases more quickly and to justify their rationales in writing has the capacity to lessen the precision of citations and citation practice.

B. Cf.'s Semiotic Function

From one perspective, this inquiry into the proper role of the cf. signal and its practice epitomizes the elevation of quarrels about the form of legal discourse over those concerning its substance. On the other hand, few would contend that analogical thinking is not essential to the development of law. If the function of the cf. signal relates to analogical reasoning, then the use of the signal must be accepted as an integral, organic part of legal discourse. This relationship may be conveyed in terms of semiotics, the study of systems of symbols and signs that have communicative value.

Semiotics, broadly defined as “the study of theories of meaning,” attempts to explain signals' meanings by identifying the role that they play as “signs” in legal discourse. According to

42. See Aaldisert, supra note 40, § 1.2, at 1-2 (noting that the number of judicial opinions submitted for publication has more than doubled in the past thirty years).
43. See Balkin & Levinson, supra note 2, at 843 (arguing that the study of legal citation “provide[s] entryways into people's lives and the larger culture in which they live and by which they are shaped”).
44. Reed Dickerson, Toward a Legal Dialectic, 61 Ind. L.J. 315, 320 (1986). When applied to the legal sphere, for example, structural semiotics demonstrates the dangerous (at least from a pedagogical perspective) circularity of defining rights and duties in relation to one another. “We might imagine, for example, a lawyer simultaneously arguing that a property owner has the right to exclude an unauthorized entrant as a trespasser and that a person seeking unauthorized access to privately held land is a trespasser because the property owner has a right to exclude others.” Jeremy Paul, The Politics of Legal Semiotics, 69 Tex. L. Rev. 1779, 1786 (1991).
semiologists, signs are shared concepts in the form of words that take their meanings (in part) from the language system in which they operate, and together create culture. Judicial opinions, for example, are signs; they draw upon facts and authorities to create rules that redefine the circumstances in which the rule will be applied. Legal terms are signs as well; for example, when attorneys or students discuss the tort doctrine of res ipsa loquitur, that term represents a concept or sign understood throughout the legal community. But the parameters of semiotics do not end there. As Professor Jack Balkin writes, “[t]he legal semiotician seeks to identify what might be called the ‘grammar’ of legal discourse—the acceptable moves available in the language game of legal discourse. These may occur at the level of permissible argument forms, modes of factual characterization, categories of social perception, or in many other ways.” Perhaps the

45. See Roberta Kevelson, The Law as a System of Signs 4 (1988) [hereinafter Kevelson, System of Signs]; Paul, supra note 44, at 1798. According to Roberta Kevelson, the foremost legal commentator on the semiotic theory of Charles S. Peirce, semiotics assumes that:

1. All communication is a process of exchange of meaningful signs, and signs and sign systems such as natural language mediate between communicating persons and those objects in the phenomenal, physical world of experience to which they refer.

2. All human societies have developed complex systems of both verbal and nonverbal sign systems which are not static but which evolve continuously to correspond with and to represent changing social norms and the evolving, growing social consciousness of any given community.

Kevelson, supra, at 4 (commenting on Charles S. Peirce’s theory). “To these major underlying assumptions I would add a third, namely, that . . . the entire notion of a legal system, consisting of interrelating communicative processes between legal discourse and legal practice, functions almost universally as a model of dialogic thought development.” Id.

It is beyond the scope of this Article to explore the possible variances of semiotic theory as they relate to legal citation. Peirce’s second assumption, above, concurs with semologist Ferdinand de Saussure’s belief that signs are defined by their interaction in a system of signification such as language. See J.M. Balkin, The Hohfeldian Approach to Law and Semiotics, 44 U. MIAMI L. REV. 1119, 1121 (1990) (explaining the basic concepts of Continental semiology).

46. See Roberta Kevelson, Semiotics and Methods of Legal Inquiry: Interpretation and Discovery in Law from the Perspective of Peirce’s Speculative Rhetoric, 61 Ind. L. most basic move available in legal discourse is the use of introductory signals to evaluate and characterize authority. Signals such as cf. are signs, too—microscopic transmitters of information within the legal community. 49

Following certain conventions—which, for the purpose of this inquiry into legal citation, may be summarized as “citation practice”—semiticians organize signs into meaningful systems known as codes. 50 Discovering or interpreting the “preferred meaning” of cf. as a signifier requires review of these codes.

At the outset, one might question whether ascertaining the cf. signal’s firm, “preferred meaning” actually benefits the legal system. Although the rule of law should theoretically remain constant, in actuality particular laws frequently change, demonstrating that signs are malleable. “Law . . . may be many things, but it is not a static, determinate, or self-contained system for deriving predetermined, absolute, ‘correct’ answers to difficult questions.” 51 Introductory signals aid this transformation as law is characterized, applied, and later recharacterized through citation. 52 Indeed, the meaning of contested political and social signs such as “federalism,” “feminism,” or “states’ rights” can and arguably should drift: 53

[I]f the rules for interpretation and discovery are said to be a part of any given system of law which they govern, then it must be conceded that the system of law, as a whole, is unstable and that this instability is desirable. What should be apparent here is that legal reasoning, from the realists’ point of view, if it is faithful to its pragmatic

That is, once the “rules” are understood, it is then more justifiable for an author to deviate from them.
most violate the traditional laws of contradiction, that is, a legal system in the process of Becoming rather than one which is at least, ideally, existent and in place.  

Most signs, if they were ships, could float rudderless. The cf. signal, however—as a device of legal discourse—is at present not seaworthy. There is too little agreement concerning its meaning, which negates its value as a sign.

Of course, unexplained cf. citations provide judges with the flexibility to refine and adapt legal doctrines to the exigencies of justice in particular cases. But predictability in the law is integral to individual justice and the legitimacy of our legal system. The smallest moves in the “language game of legal discourse” should not be the most consequential. The guideposts for legal analogy should not be set in shifting foundational sands.

It is said that “not even the Emperor Augustus could effectively mandate the meaning of a word.” Nonetheless, some effort should be made to lend clarity to legal discourse where it is possible. Authors cannot control their words once they are set upon the page or upon a public digital medium, but readers should be able to distinguish concepts that authors wish to leave ambiguous from those that represent considered thought. With this goal in mind, this Article turns to review judicial interpretation of the cf. signal, in order to advance a pragmatic recommendation to reform the rules of citation.

Duncan Kennedy’s work in constructing categories of legal argumentation has been described as legal semiotics because he emphasized the ways in which legal concepts draw meaning from their place within broader
II. THE Cf. SIGNAL IN PUBLISHED OPINIONS

When courts use the cf. signal, legal discourse often goes up in smoke. A review of recent citation practice in published opinions reveals that, like their counterparts before the bar, the legal writers on the bench use and interpret cf. citations in an unpredictable, inconsistent, and occasionally outright contradictory fashion. Part of the reason, no doubt, is that law clerks typically draft initial opinions and judges review those drafts. But judges do not often pick over draft opinions to check marginal signals. Thus, a sloppy signal system permits law clerks to make (or unmake) law in ways that we do not even notice. This Part explains the creative dilemma posed by the cf. signal, reviews the spectrum of meanings that legal writers have ascribed to the signal, and illustrates the cf.’s hidden communicative possibilities.

A. Analogical Reasoning with “Cipher” Signals

Strange, although analogical thinking is highly valued as a skill in the practice of law, the word “analogy” often appears in the case reports alongside “inapposite,” “speculative,” and other pejorative words and phrases from the legal lexicon. In no place is this disapprobation more apparent than in judicial decisions construing the cf. signal. In State v. Stafford, for example, the North Carolina Supreme Court appeared to draw a stark line between authority and analogical reason by dismissing a petitioner’s citation as improvidently based on a double jeopardy case that did “not bear upon the matter of punishment,” with the following statement:

legal argument, just as semioticians have stressed the ways in which words take meaning from their place within a larger linguistic system." I d. at 1781-82. On the other side of the debate, R oberta K evelson excludes such structuralist approaches from the realm of Peircian semiotics. See K evelson, supra note 46, at 357.

59. The case reports contain countless examples of cf. signal usage, but this A rticle cannot hope to encompass even a moderate portion of this citation practice. Instead, this review winnows the bulk of ‘signal’ decisions to those that use or analyze the cf. signal, its ambiguity, or its potential to mislead.

62. I d. at 376. (citing G reen v. U nited States, 355 U. S. 184 (1957)); see also infra Part I I. B (discussing the entire category of similar judicial treatment).
For [the cited court's] statement that 'there must be repose not merely as to the severity of the court's view, but as to the severity of the crime,' it cited no authority but suggested by way of a 'cf.' that Green v. United States was sufficiently analogous to lend some support to its statement.\[63\]

The translation of arguably dissimilar principles and facts into new circumstances seems integral to the production of law, but it apparently ceases to influence some courts when preceded by the cf. signal, becoming mere analogy.\[64\] Perhaps analogical reasoning elicits such disapproval because judges must spend their days employing it.\[65\]

63. Stafford, 164 S.E.2d at 376 (emphasis added) (citation omitted). Although not cited in the opinion, the language appears to track that of The Bluebook. See, e.g., BLUEBOOK ELEVEN, supra note 33, Rule 1.2(a) (containing identical language (“sufficiently analogous to lend some support to its statement”) to that of the court); BLUEBOOK SIXTEEN, supra note 3, Rule 1.2(a) (same except for the deletion of the word “some”).

64. At least two cases demonstrate the persistence of the distinction between analogical and controlling authority. See Local 194, Retail, Wholesale & Dept Store Union v. Standard Brands, Inc., 540 F.2d 864, 867 (7th Cir. 1976) (holding that the union had standing to bring a Title VII action despite Warth v. Seldin, 422 U.S. 490 (1975), because Warth’s cf. citation to Federal Rule of Civil Procedure 23 suggested that the Federal Rule’s class-action requirements were “applicable only by analogy”); United States v. Carter, 522 F.2d 666, 685 n.62 (D.C. Cir. 1975) (“The court upheld the introduction . . . and referred to [the statute] with a ‘cf.’ citation, indicating the reference was by analogy and not a direct holding under the statute.” (citing United States v. Angelo, 153 F.2d 247 (3d Cir. 1946))).

65. For example, the Supreme Court’s use of the cf. citation as analogical support in Patterson v. McLan Credit Union, 491 U.S. 164, 185 (1989) (responding to a racial discrimination suit by ruling that an employer violated § 1981 of the Civil Rights Act only if the promotion would have resulted in a “new and distinct relation between the employee and the employer”), has received criticism. The Patterson Court followed this statement with a cf. citation to Hishon v. King & Spaulding, 467 U.S. 69 (1984), in which a law firm associate challenged her failure to be invited into the partnership on Title VII grounds. See Patterson, 491 U.S. at 185. The justices inferred in Patterson that the Court’s intention in Hishon was to provide at least an example of what situation would constitute the required new relationship. See id. at 186. However, as the Sixth Circuit subsequently noted in Holt v. Michigan Dept of Corrections, 974 F.2d 771 (6th Cir. 1992), “some courts have viewed Hishon’s facts to fall somewhere in the middle of a continuum of employment scenarios that give rise to ‘new and distinct’ employment relations.” Id. at 774 (discussing Patterson, 491 U.S. at 185).

Judges who consider cf. citations rarely get to reproach counsel who construct improper analogies, although such improper use can be devastating. But see Wolgin v. Magic Marker Corp., 82 F.R.D. 168 (E.D. Pa. 1979). In this securities fraud action, the plaintiff’s motion for class-action certification was at issue. The defendant argued that Federal Rule of Civil Procedure 23(a)(4)—which requires that “the representatives will fairly and adequately protect the interests of the class”—was not satisfied by the class, but the court vigorously rejected that contention:

Defendant’s vehement opposition to this motion for class action certification has apparently led defense counsel to take certain liberties with the precedents upon which they rely. I was particularly surprised to see my own opinion in Axelrod v. Saks & Co., 77 F.R.D. 441 (E.D. Pa. 1978)—an opinion in which I found no conflicts of interest among the named plaintiffs and the class members, and so unhesitatingly
The result of this intensely creative enterprise is that, as often as not, cf. analogies are misunderstood. If the author of the citation has a later opportunity to explain, then the original analogy might be recovered, but only after considerable confusion or a proliferation of unintended consequences.

Earnest judges wander in literally every direction seeking the elusive meaning of cryptic cf. citations. In the bulk of cases, courts follow the definitions set out in successive editions of The Bluebook and attempt to construct analogies that represent positive authority for the proposition offered. In some situations, however, courts use the cf. to construct analogies that damage the suggested conclusion, failing to recognize the original author’s motivation as well as the substance of his or her analogy. Some courts essentially ignore relevant cases or dismiss precedent introduced by the cf. signal as

certified the proposed class—cited by defendants here in support of this proposition: “Numerous courts have viewed the presence of even a potential conflict as a ground for summary denial of class certification.”

Id. at 174 n.1. The defendant’s citation of Axelrod was preceded by a cf. signal. The judge continued: “One can only wonder what proposition ‘sufficiently analogous’ to the quoted proposition derives support from Axelrod.” Id.

66. The author could, of course, explain the citation in a parenthetical. For a further discussion of the need for parenthetical explanation when using the cf. citation, see infra Part III.B.

67. See, e.g., Stafford, 164 S.E.2d at 376 (tracking in 1968 The Bluebook’s definition of the cf. signal from the 1967 edition of The Bluebook (BLUEBOOK ELEVEN, supra note 33)).

68. See supra notes 29-35 and accompanying text (summarizing past and present definitions of signal). While Bluebook definitions of the cf. signal have shifted over time, the common rationale underlying each change is the recognition that the cited authority, while reliant upon different facts, at least supports the stated proposition.

69. See, e.g., United States v. Ridinger, 623 F. Supp. 1386, 1397 (W.D. Mo. 1985) (criticizing the First Circuit for ignoring relevant precedent in United States v. Acevedo-Ramos, 755 F.2d 203 (1st Cir. 1985)). In Ridinger, the district court considered an appeal from a magistrate judge’s detention order. See Ridinger, 623 F. Supp. at 1388. The magistrate judge’s finding included a declaration that the defendant had been involved in two murders, evidence of which was considered in camera and was not provided to either the government’s attorneys or the defendant and his attorney. See id. at 1389. The magistrate judge stated that Acevedo-Ramos supported his in camera review. See id. at 1397. Acevedo-Ramos held that a magistrate could examine evidence in camera in a bail hearing where the government could show a necessity for keeping sources confidential. See Acevedo-Ramos, 755 F.2d at 208-09. The Ridinger court, however, stated: “[W]e believe that the First Circuit looked the other way when it decided that case.” Ridinger, 623 F. Supp. at 1397. In support of that statement, the court pointed to two cf. cites in Acevedo-Ramos to United States v. Stanford, 551 F. Supp. 209 (D. Md. 1982). See Ridinger, 623 F. Supp. at 1398. In Acevedo-Ramos, the judge heard testimony from an FBI agent based on hearsay from confidential sources and the defense attorneys were able to cross-examine that agent. See Acevedo-Ramos, 755 F.2d at 205. The Acevedo-Ramos court cited Stanford for the proposition that the judge can test the accuracy of evidence and testimony by considering information in camera. See id. at 208. In fact, Stanford merely held that, as the defendant was provided with a summary of the sealed affidavit, he did have an
“distinguishable”—despite the fact that The Bluebook identifies authorities so introduced as supportive authority— and go on to perform novel analyses. In Toledo TV Cable Co. v. Commissioner, for example, the United States Tax Court glossed over its previous endorsement of an authority by stating, “our citation was preceded by the signal ‘cf.’ which hardly connotes approval.”

When the nation’s highest court fails to explain cryptic cf. citations, the clarity and predictability of American law suffers profoundly. The best example of the Supreme Court’s use of an ambiguous cf. citation is Stone v. Powell, a case that many lower federal courts and commentators have analyzed extensively. Perhaps the Court deliberately utilized a cf. citation in order to avoid having to define its terms, to provide needed flexibility to lower court decisionmakers, or to avoid expansion of the Fourth Amendment. It is impossible to know. The result has been time-consuming construction, deconstruction, and extrapolation of reinventive analogies. The Stone Court limited the relief available to prisoners asserting Fourth Amendment violations on collateral review of their opportunity to refute the evidence and his due process rights were not violated. See Stanford, 551 F. Supp. at 211.

The petitioner argued further that the Toledo TV court had previously agreed with that proposition in David Hoffman v. Commissioner, 48 T.C. 176 (1967). See Toledo TV, 55 T.C. at 1120. convictions. It stated: “[W]here the State has provided an opportunity for full and fair litigation of a Fourth Amendment claim, a state prisoner may not be granted federal habeas corpus relief on the ground that evidence obtained in an unconstitutional search or seizure was introduced at his trial.” Footnote thirty-six, which followed this assertion, contained only a cf. citation to the entire case of Townsend v. Sain. The Court thus failed to clarify the significance of the Townsend opinion to Stone. Nor did the concurring opinion or either of the two dissenting opinions include any discussion of the inscrutable reference to Townsend.

The lower federal courts have sought to make sense of the citation, variously interpreting Townsend through the prism of Stone to discern the following: what Stone's footnote thirty-six does not mean, what clues Stone and Townsend provide, whether the

79. 372 U.S. 293 (1963). Townsend involved a defendant petitioning for habeas corpus relief because his confession, which was admitted into evidence at trial, had been procured through the use of a truth serum. The Court ruled that the standard for when a habeas court should grant an evidentiary hearing to a petitioner is where facts are in dispute and the defendant “did not receive a full and fair evidentiary hearing” at trial. Id. at 312. The opinion listed six circumstances in which a federal court must grant an evidentiary hearing. See id. at 313. It is most likely that this is the discussion in Townsend to which the Stone Court referred.
80. See Gates v. Henderson, 568 F.2d 830, 836-40 (2d Cir. 1977) (en banc) (finding that the defendant had the opportunity to fully and fairly litigate his claim, but failed to raise it). The Gates court concluded that Stone and Townsend did not completely define the “full and fair hearing” required by the Fourth Amendment:

While we are not fully appreciative of the significance of the footnoted reference, we are persuaded that it cannot be reasonably interpreted to require a federal court to conduct a hearing on an issue where the state prisoner, having an opportunity to do so, never tendered the question to the state court. Such a proposition would totally undercut the thrust and rationale of Stone.

81. See O’Berry v. Wainwright, 546 F.2d 1204 (5th Cir. 1977). In O’Berry, the Fifth Circuit disagreed with a petitioner who claimed that Townsend defined what the Stone Court meant by an “opportunity for full and fair litigation” of a Fourth Amendment claim. The court stated: “[A]lthough we agree that Townsend is of some help in defining ‘full and fair adjudication’ by a state court, we cannot . . . endorse its wholesale use” in considering whether to hear petitioner’s claim. Id. at 1211. According to the Fifth Circuit, Townsend “applies only in determining whether a state court has granted Petitioner a full and fair evidentiary hearing—a hearing limited to findings of fact.” Id. The majority concluded that O’Berry involved only legal issues, stripping the Townsend test of most of its usefulness. See id. The Fifth Circuit also examined the cf. citation in deciding whether “full and fair” consideration requires hearings in state trial courts as well as appellate courts, but shed little light on the controversy: “[C]onsistent with the ambiguity of the Supreme Court’s opinion, . . . sometimes ‘full and fair
Townsend test can be “applied literally” or not, whether the Stone Court intended to “engraft” the Townsend criteria into its holding, whether Stone made a “backhanded reference” to Townsend, so that the Townsend test “must be filtered through the holding and rationale of Stone before it can be applied to state court fourth amendment proceedings”, and whether the Court would have been so subtle as to premise its analysis on a case cited with a cf. signal in a footnote.

consideration’ means consideration by two tiers of state courts—sometimes it requires consideration by only one.” Id. at 1213.

82. Mack v. Cupp, 564 F.2d 898, 901 (9th Cir. 1977). “In Stone, the Court cited as analogical authority Townsend v. Sain, which established criteria for determining when a federal district court should hold an evidentiary hearing in a habeas corpus proceeding.” Id. at 900 (citation omitted). “Although . . . the Townsend test must be given great weight in defining what constitutes full and fair consideration under Stone, we do not believe that it must always be applied literally . . . .” Id. at 901. The Ninth Circuit concluded that Townsend’s contemplated use of state fact-finding procedures in Fourth Amendment claims exceeded Stone’s requirement that the state extend an opportunity for “full and fair” deliberation. See id.

83. See Dunn v. Rose, 504 F. Supp. 1333, 1337-38 (M.D. Tenn. 1981) (“Stone seems to contemplate that, when the facts of a search-and-seizure claim are in dispute, ‘fullness and fairness’ require a state court hearing that satisfies the criteria of Townsend v. Sain.” (citation omitted)). In the eyes of at least one judge, the reference to Townsend was “the only substantive indication of what the Supreme Court meant by an opportunity for full and fair litigation.” Id. at 1338. He concluded that petitioners raising Fourth Amendment claims would be “entitled to a federal evidentiary hearing if the state court proceedings failed to pass muster under the Townsend criteria.” Id. The judge observed, however, that the cf. signal intimated that the Townsend criteria were not to be applied literally: “To the extent that Townsend [would] require[] a reweighing of the merits (e.g., determining whether the record ‘fairly supports’ the state courts’ decision), its application would be inconsistent with the res judicata principle underlying Stone.” Id.

84. Doleman v. Muncy, 579 F.2d 1258, 1264 (4th Cir. 1978). The court acknowledged both the petitioner’s argument along such lines and the state’s demurrer that, “[h]ad the Court intended to engrat the Townsend v. Sain criteria into the Stone situation, it could have done so expressly instead of by a passing footnote reference.” Id. Ultimately finding that, although Stone required an investigation into whether there was an opportunity to raise the Fourth Amendment claims, the court stated that the Townsend inquiry only becomes an issue if, after the question of opportunity has been satisfied, the prisoner alleges “something to indicate that his opportunity for a full and fair litigation of his Fourth Amendment claim . . . was in some way impaired.” Id.

85. Palmigiano v. Houle, 618 F.2d 877, 881 (1st Cir. 1980).

86. Id. In Palmigiano, the court addressed the issue of whether the “misallocation of the burden of proof denied petitioner a full and fair opportunity to litigate his fourth amendment claims.” Id. The court held that “the criteria set forth in Townsend can be used as a guide in determining whether there has been full and fair state litigation of fourth amendment claims, [but] they are not commandments the breaking of any of which absolutely requires an evidentiary hearing in the federal court.” Id. at 882.

87. See Willett v. Lockhart, 37 F.3d 1265, 1267-69 (8th Cir. 1994) (noting that Stone’s confusing cf. citation had led to “lower federal courts applying a degree of habeas review that
Predictability of the law suffers because an author can no longer control how the reader perceives an idea once it is committed to paper. Unexplained cf. citations such as Stone’s notorious footnote thirty-six exacerbate this problem and drain judicial resources on a significant scale because authors so often fail clearly to express their ideas in words, forcing the reader into an exhausting search for meaning. Some of the time-consuming analogical constructions done by the lower courts in the aftermath of Stone could have been avoided if the Court had seen fit to reference Townsend with a parenthetical phrase—as The Bluebook now strongly recommends for all citations beginning with cf.—explaining why it cited Townsend, or even provided a pinpoint citation identifying the part of the decision that it wanted the reader interpreting Stone to apply. Instead, unexplained cf. usages like this force diligent judges to wander in search of—and wonder about—the meaning of these cryptic citations. The following subsections illustrate the spectrum of interpretations applied to ambiguous cf. citations in a host of lower court decisions.

1. Positive or Persuasive Authority. Although cf. citations are sometimes considered marginal or makeweight support for legal propositions, courts frequently interpret authorities preceded by the cf. signal as positive, contributory grounds for their conclusions. For ranges from imperceptible to quite broad,” and concluding that “[t]he cf. signal tells us that Townsend supports a different proposition” from that of Stone).

88. See State v. McKinney, 917 P.2d 1214, 1235 (Ariz. 1996) (Martone, J., dissenting) (“The use of the cf. cite is a frank acknowledgment that there is no clear support for the proposition.”); see also Hensley v. Eckerhart, 461 U.S. 424, 433 & n.8 (1983). Hensley cited several cases for the proposition that a “prevailing party” for purposes of recovering attorney’s fees under 42 U.S.C. § 1988 (1982) is one who “succeed[s] on any significant issue.” Id. The Court then used a cf. signal, in a footnote, to refer to a case requiring “success[ ] on the central issue,” and failed to resolve the apparent conflict between these two propositions. Id.; see also Fast v. School Dist., 728 F.2d 1030, 1032 n.2 (8th Cir. 1984) (stating that the Supreme Court’s description of a legal rule as “a typical formulation” did not suggest any disagreement, and that the only alternative rule “appears in a footnote as a parenthetical description of a holding by another circuit, preceded by the signal ‘Cf.’”).

89. See, e.g., Chemical Bank v. Arthur Andersen & Co., 726 F.2d 930 (2d Cir. 1984). In this case, the Second Circuit considered whether unsecured replacement notes evidencing loans made by a bank were securities within the meaning of the Securities Exchange Act and the Securities and Exchange Commission’s rules. It quoted language from the Supreme Court’s decision in Marine Bank v. Weaver, 455 U.S. 551 (1982):

The [Marine] Court cited [with a cf. signal] Judge Wright’s concurring opinion in Great Western Bank & Trust v. Kotz, 532 F.2d 1252 (9th Cir. 1976), in footnote 10 as supporting authority for its holding that the “agreement, negotiated one-on-one by
example, Justice Blackmun’s dissent in Florida v. Riley\(^90\) correctly recognized that the cf. signal connotes supporting, though not controlling, authority. He wrote, “[t]he opinions of both Justice Brennan and Justice O’Connor, by their use of ‘cf.’ citations, implicitly recognize that none of our prior decisions tells us who has the burden of proving whether Riley’s expectation of privacy was reasonable.”\(^91\)

Even among courts that view cf. citations as positive authority, courts assign differing weights to those authorities. In Lebowitz v. Forbes Leasing & Finance Corp.,\(^92\) a federal district court determined that a cf. citation presented controlling authority. Lebowitz involved a challenge to the Pennsylvania foreign attachment procedures that was raised in light of the Supreme Court’s decision in Sniadach v. Family Finance Corp.,\(^93\) which struck down Wisconsin’s prejudgment garnishment procedure because it violated due process.\(^94\) After examining Sniadach and its progeny, the court expressed “grave doubts” about whether the procedures followed in Pennsylvania were constitutional.\(^95\) But it decided that it was compelled to uphold the procedures based on two citations by the Supreme Court in Sniadach. The first citation, introduced by a cf. signal, identified Ownbey v. Morgan\(^96\) as supporting the conclusion that prejudgment attachments may satisfy due process in “extraordinary situations.”\(^97\) Sniadach then used a see signal to cite McKay v. McInnes\(^98\) for the proposition that prejudgment attachments may satisfy due process in general if not in every situation.\(^99\) The Lebowitz court concluded that Sniadach “at least recognizes the vitality of Ownbey and McKay, even if it does not impliedly approve of them.”\(^100\) Thus, the court concluded that it was

bound to uphold the Pennsylvania attachment procedures, even though it evidently felt that the Supreme Court might decide those cases differently if presented with the opportunity.

Given the definition of the cf. signal—that it refers to authorities that “lend support”—cases like Lebowitz are troublesome. If commentators are to ascribe valid meanings to introductory signals and the citations they select, surely using authorities prefaced by the cf. signal as positive authority to the point where it controls or dictates a result increases ambiguity and reduces the clarity of those decisions. Such use of the cf. imperils the quest for uniformity in interpretation and thwarts the goal of achieving predictable outcomes in similar cases.

2. Unclear Authority: Citation Under Weightless Conditions. Another response to indecipherable cf. citations is to treat them as malleable, oblique allusions to other doctrines or judges. Clearly there is some value in controlled or intentional ambiguity, which use of the cf. signal masks well. It permits judges to refrain from pronouncing too much law, especially in situations in which they anticipate unpredictable factual situations that may necessitate case-by-case analysis, or when dealing with controversies that implicate broad social disputes unripe for decision. The unexplained cf. citation introduces authority that permits the author to declaim that the opinion contains some statement on an issue, without drawing necessary (or even permissible) conclusions.

In this admiralty case, a vessel owner sought to garnish funds to be remitted to the charterer under a letter of credit as funds were transferred from a Spanish bank to a Canadian bank through New York banks. See id. at 263-64. The court agreed with the appellant’s argument that Ratto v. Italia, 12 N.Y.S.2d 617 (City Ct. 1938), was “a fair and equitable decision,” but decided that it was a weak precedent because the decision was based on two cf. references. See Reibor Int’l Ltd., 759 F.2d at 267. It concluded that the decision [Ratto] is “hardly likely to be followed by any New York court considering facts like those before us.” Id; see also supra notes 73-79 and accompanying text (discussing ambiguous cf. reference in Stone v. In Gifford v. Tiernan,\(^{103}\) for example, the Ninth Circuit held that the claim of an individual who proceeded in forma pauperis, challenging the constitutionality of the Federal Election Campaign Act (FECA),\(^{104}\) could be dismissed as frivolous without certification to the court of appeals for expedited en banc review, pursuant to FECA.\(^{105}\) At issue was the then-recent statement by the Supreme Court in California Medical Ass’n v. Federal Election Commission:\(^{106}\) “[W]e do not construe § 437h to require certification of constitutional claims that are frivolous . . . .”\(^{107}\) The Ninth Circuit acknowledged that “[i]t is not entirely clear whether this statement by the Supreme Court refers solely to claims classified as ‘frivolous’ within the meaning of 28 U.S.C. § 1915(d).”\(^{108}\) The Supreme Court had followed its statement with an unexplained cf. citation to California Water Service Co. v. City of Redding,\(^{109}\) which dealt with dismissals of previously decided federal questions or other claims without merit. The Ninth Circuit, left to its own devices in interpreting the case, plugged the facts of each case into The Bluebook’s cf. definition,\(^{110}\) and concluded that “the Supreme Court considers dismissals as frivolous pursuant to 28 U.S.C. § 1915(d) to be analogous to, but not identical with, dismissals for lack of a substantial federal question.”\(^{111}\) Without further comment, the Ninth Circuit found other grounds for its decision “that the [Supreme] Court feels that ‘insubstantial’ questions need not be certified.”\(^{112}\) The Supreme Court’s ambiguity, therefore, remained unclarified.

This authorial sleight of hand allows the judiciary to retain its normative function and resolve the present controversy while leaving the scene with few legal fingerprints. Depending on the reader’s perspective, such ambiguity might represent an intolerable refusal to acknowledge and discuss patent legal conflicts. Even if it is desirable

to eliminate intentional ambiguity, however, this situation may be difficult to surmount. If judges are using the cf. signal to identify intentional ambiguities, then proscribing deliberate vagueness may be an inadequate solution because the author may want the issue to be resolved either at a later time or by a different court.

3. Dismissed as Distinguishable. In many cases, courts fail to reconcile seemingly contradictory laws and use the cf. signal as a wildcard, interpreting the cited case with whatever weight or significance they choose. Such behavior abnegates the author’s intended meaning with prejudice, because The Bluebook identifies the cf. signal as a supporting signal that may be used when the authority is not directly on point. The primary mechanism through which these courts interpret cf. references is to dismiss or discard the cited authority as distinguishable, either in the facts stated or occasionally in the legal proposition cited. Some decisions also

113. Intentional ambiguity is, indeed, the defining attribute of riddles: The riddle is an arrangement of words by which is understood or suggested something that is not expressed; or else it is an ingenious and witty description of this unexpressed thing by means of qualities and general traits that can be attributed quite as well to other things having no likeness or analogy to the subject.

See id. at 553. In Dixon v. 80 Pine Street Corp., 516 F.2d 1278 (2d Cir. 1975), the Second Circuit analyzed the lower court’s and the merits panel’s cf. citation to United States v. Nixon, 418 U.S. 683 (1974):

Though the citation to Nixon suggests that the merits panel may have thought that the need for a contempt adjudication was as inappropriate for the City as the Supreme Court thought it was for the President [in Nixon] our Court has subsequently viewed Dixon as something of an aberration from the usual rule against appealability. . . . Whether Dixon is to be diminished as resting on a non-precedential order or distinguished because it involved a city and contempt had been sought without success, it does not commit this Circuit to abandonment of [a prior rule], which we have repeatedly acknowledged.

Conn. 1997) (using a cf. citation to two cases to illustrate the difference between New York and federal maritime law). The two appellate cases cited in Northern Tankers had both cited to New York law and then used the cf. signal to reference federal maritime law. See Carte Blanche (Singapore) PTE., Ltd. v. Diners Club Int’l, Inc., 2 F.3d 24, 26 (2d Cir. 1993); Wm. Passalacqua Builders, Inc. v. Resnick Developers South, Inc., 933 F.2d 131, 138 (2d Cir. 1991). Apparently the cf. signal indicates that the two are parallel, but not identical.

distinguish and dismiss cited cases based on their general inapplicability or inappropriateness, limited neither to the facts nor to the law cited.\textsuperscript{117}

Givens v. United States\textsuperscript{118} provides a nice example in this “dismissed as distinguishable” category. In Givens, the petitioners challenged their convictions because of delays between an original indictment, later dismissed, and their trial on the second indictment.\textsuperscript{119} The issue was whether the Sixth Amendment’s guaranty of a speedy trial applied to the time interval between dismissal of the first charge and trial on the second.\textsuperscript{120} The Givens court considered two prior cases involving the same issue—Branch v. United States\textsuperscript{121} and Robinson v. United States.\textsuperscript{122} In Branch, the court held that the time interval between dismissal of a first indictment and the filing of a second was relevant to Sixth Amendment analysis.\textsuperscript{123} In Robinson, the court held that the same period did not apply to the right to a speedy trial,\textsuperscript{124} following a similar rule announced in a recent Supreme Court case, United States v. MacDonald.\textsuperscript{125} The Robinson court cited Branch with a but cf. signal, “but did not suggest any distinction that would allow the earlier decision to survive the discharge of the second indictment.”

See Marzonie, 495 N.W.2d at 793. In Thornton, however, the Michigan Supreme Court had confronted similar facts in which “the injury could have occurred whether or not Mr. Thornton used a motor vehicle.” Thornton, 391 N.W.2d at 327, and followed this observation with a cf. cite to two cases, Saunders v. Detroit Automobile Inter-Insurance Exch., 332 N.W.2d 613 (Mich. Ct. App. 1983), and Mann v. Detroit Automobile Inter-Insurance Exch., 314 N.W.2d 719 (Mich. Ct. holding of MacDonald.” 126 Despite the Givens majority’s confusion regarding the use of the but cf. signal, the dissent recognized the distinction between the two cases:

In the parenthetical description following the citation to Branch, the Robinson court stated that a “four and one-half month delay between dismissal of [a] charge and reindictment on [that] same charge counted for speedy trial clause purposes where dismissal [was] unrelated to investigative need on the original charge.” . . . [T]his description of Branch distinguishes it from the facts of MacDonald (initial charges dismissed when prosecutor concluded that allegations were untrue, indictment on same charges brought after further investigation), and could be read to indicate that the court would not apply MacDonald to a case like Branch or the instant case, where the delays complained of are due to dismissal of indictments without prejudice for the convenience of the government. 127

Readers of legal materials know the difficulty inherent in deciphering unexplained cf. citations. We may not fault the judges for refusing to revive stillborn ideas, but surely the judiciary should not just ignore poorly conceived analogies. The clarity of the law suffers when published opinions fail to explain why proffered analogies must fail. Even more importantly, our laws derive their legitimacy in part because we know why they are maintained. It is the function of the

judiciary to review citations and rail against analogies that they consider inapposite. Separating such flawed analogies from perfectly devious allusions (so-called “backhanded references”\textsuperscript{128}) remains a subjective exercise, at least for the present.

4. Negative Authority and Straw Analogies. In legal discourse, as well as in life, chaotic situations often provide cover for subtle maneuvers. Unfortunately, the ambiguity and controversy surrounding the cf. citation have led some legal writers to depart from The Bluebook’s definition of the cf. citation as supporting authority and ascribe a contradictory value to the signal, showing extraordinary creativity in interpreting what they deem to be ambiguous cf. citations as negative authority.\textsuperscript{129} The result is that, in some cases, the cf. signal has been used as a lesser form of the but see signal. The infrequent use of the but cf. signal\textsuperscript{130} use may also indicate that cf. is not interpreted as positive support in many cases.\textsuperscript{131}

Consider, for example, the Ninth Circuit’s decision in Campbell v. Wood.\textsuperscript{132} Campbell involved a habeas petitioner sentenced to death who challenged, inter alia, the constitutionality of execution by hanging.\textsuperscript{133} In denying his petition, the court used a cf. citation to Gregg v. Georgia,\textsuperscript{134} and stated that the proper constitutional standard for evaluating methods of punishment was “whether the method involves ‘the unnecessary and wanton infliction of pain.’”\textsuperscript{135} In dissent, however, Judge Reinhardt criticized the majority for

abandoning traditional Eighth Amendment standards: “The majority cannot cite a single case in support of its astonishing and wholly unprecedented decision to bar the use of traditional Eighth Amendment concepts in cases involving forms of punishment, nor even a legal argument based on a remotely analogous case.”136 In a footnote, Judge Reinhardt continued: “[O]n the very same page as the passage the majority cites, the Gregg plurality made clear that ‘excessiveness’ is only one part of any Eighth Amendment analysis. Thus, excessive pain and disproportion are not the exclusive considerations in Eighth Amendment analysis.”137 In effect, the majority had used a cf. citation to Gregg to eliminate one of the prongs of the Gregg analysis.

When left unexplained, or only partially explained, the cf. citation is the signal that is the most vulnerable to unanticipated interpretations. Judges are effectively granted license to take the cited cases out of context. The signal thus absorbs some criticism from observers irritated at what they perceive as the use of Bluebook niceties to present slightly tweaked renditions of the same law.138 For example, during the course of the Iran-Contra Affair litigation, D.C. Circuit Judge (now Chief Judge) Harry Edwards complained in his

McKellar, 494 U.S. 407, 414 (1990), to United States v. Leon, 468 U.S. 897 (1984)). In Butler, a state prisoner attacked his conviction via a petition for federal habeas relief alleging that he had been interrogated after having requested counsel for a separate investigation. See Butler, 494 U.S. at 410. The Court held that his claims were barred by the doctrine against retroactive application of new rules of constitutional criminal law announced in Teague v. Lane, 489 U.S. 288, 315 (1989) (O’Connor, J., plurality opinion). See Butler, 494 U.S. at 415. The Court in Butler stated, “[t]he ‘new rule’ principle therefore validates reasonable, good-faith interpretations of existing precedents made by state courts even though they are shown to be contrary to later decisions.” Id. at 414. This statement was supported by a cf. citation to United States v. Leon, 468 U.S. at 918-19, with a parenthetical observing that the exclusionary rule should not “deter objectively reasonable law enforcement activity.” Id.

In dissent, Justice Brennan rejected this proposition and the authority it used for support: The Court’s analogy between the deterrent function of federal habeas and the deterrent function of the exclusionary rule . . . is unsound, for the purported analogy continues to beg the question of what conduct ought to be deterred. . . . Given the difference between the nature of police conduct at issue in Leon and judicial interpretation, the majority’s proffered analogy is flawed. It ultimately does no more than borrow language from Leon, and . . . fails to justify the majority’s decision to embrace a “reasonableness” test as the appropriate objective of state-court adjudication.

opinion, In re Sealed Case, that Independent Counsel Lawrence Walsh had not explained the nature of an analogical argument:

The Independent Counsel cites three cases for the proposition that personal jurisdiction over the individual served with a subpoena is enough to compel him to produce documents belonging to companies he represents. He introduces these cases with the signal “Cf., e.g.” Here, however, even that notoriously enigmatic signal has been taxed beyond its limits. We view with profound disfavor the Independent Counsel’s disingenuous attempt to enlist prior holdings in the service of doctrines they in no wise support.

Although it is impossible to know what motivates legal writers to construe the cf. as negative authority, at least two unsavory possibilities exist. First, courts may deliberately misunderstand the original argument and invent negative analogies in order to obscure an author’s intended analogies. Second, courts may create weak positive analogies—analogical straw men—whose patent lack of persuasiveness contributes to courts’ contradictory rulings. Needless to say, either insidious possibility subverts meaningful legal discourse. Likewise, because it is seen alternately as persuasive, unclear,

140. Id. at 1273 n.3 (emphasis added) (citation omitted). The court could not determine what analogies Lawrence Walsh intended to draw:

1. It is hard to imagine what parallel the Independent Counsel purports to find . . . . A gain, the analogy the Independent Counsel apparently sees is elusive. The third case cited . . . is even further off point . . . .

This problem persists when litigants question cf. citations on appeal because courts can more easily articulate how they feel about a decision than why they feel that way. For example, in Hunt v. Gan-Trade Corp., No. H-89-2379, 1997 WL 314384 (S.D. Tex. Mar. 26, 1997), the court dealt with a challenge to a decision of the Interstate Commerce Commission on the ground that its action was arbitrary and capricious. See id. at *1. The court disagreed because the Commission introduced a case on which it relied with a cf. signal:

This argument fails because the Commission only cited Amoco Fabrics as “cf.” authority . . . . A “cf.” cite simply means that the cited case, while standing for a proposition different from the one stated, lends some support. The trustee does not attack the proposition for which the case was cited: only whether the case directly supports it. The Court finds that the case was sufficient as cited, and the Commission’s decision was not rendered arbitrary and capricious as a result.

ignored, dismissed, or misunderstood, the cf. signal scrambles legal communications.

III. THE CF. SIGNAL: THE CIPHER TO BETTER UNDERSTANDING IN LEGAL DISCOURSE

A. Decoding Bluebook Signals

As previously explained, legal semioticians can fashion codes that consolidate related signs to provide context for understanding and to illuminate the distinctive value or “preferred meaning” of a particular sign. Unfortunatley, however, the foregoing review of citation practice in the legal community suggests that, in reality, the use of the cf. signal is generally standardless. The only common denominator is that there is no common denominator. Considering the extent to which legal writers attempt to evince conformity with citation manuals such as The Bluebook, this conclusion suggests that these citation manuals fail to guide legal writers in a way that allows them to harness the cf.’s communicative potential. This Part considers why the signal definitions in The Bluebook—legal citation’s prevailing code—fail to do so.

The sixteenth edition of The Bluebook identifies six signals that buttress propositions ([no signal], accord, see, see also, cf., and compare—the last of which is segregated as a “[s]ignal that suggests a useful comparison,” for no apparent reason), two signals that introduce contradictory statements in the same manner (but see and but cf.), and two signals that inform the reader that other authorities discuss subject matter related to the proposition (see generally, and e.g. combined with any other signal). The Bluebook organizes these signals in groupings that range from “[s]ignals that indicate

141. Cf. Part I of this Article, supra, in which I intentionally avoided use of the cf. in my citations. Since the reader is now at the stage in this Article at which the suggested rules of use for the cf. signal are outlined, use of the cf. is less ambiguous, and, therefore, I succumb. See generally Paulsen, supra note 2, at 1791 (reviewing the fifteenth edition of The Bluebook as well as several other citation manuals and pointing out the irony of the “ever-changing uniform system of citation”).

support”\textsuperscript{146} or “[suggest[] a useful comparison,”\textsuperscript{147} to negative authority,\textsuperscript{148} background material,\textsuperscript{149} and other matters.\textsuperscript{150} Within each grouping, The Bluebook appears to order signals by weight. Signals attributing quotes ([no signal], accord) precede see, which “directly states or clearly supports the proposition.”\textsuperscript{151} Just as beauty lies in the eye of the beholder, the weight of an authority lies in the mind of the citation writer, and not merely because he or she often may employ a three-hundred-plus page manual for citation practice. The writer must make some representation concerning how strongly the cited authority supports the given proposition.

Legal writers are receiving strange messages. Consider that, after see, The Bluebook explains see also, which “constitutes additional source material that supports the proposition . . . [and] is commonly used to cite an authority supporting a proposition when authorities that state or directly support the proposition already have been cited or discussed.”\textsuperscript{152} The see also signal presumably introduces authority of lesser weight because authorities so cited do not state or “clearly” support the proposition. Yet the inclusion of “also” in the signal’s name implies that authors must find clear support for their propositions if no authority is mentioned in the text. Few writers use “also” as the first word of a new, pivotal paragraph. Furthermore, the definition assumes the presence of additional source material. Every writer’s first source must therefore constitute clear support! This definition places pressure on legal writers to overstate their confidence in sources.

The Bluebook then turns to the nettlesome cf. signal, which it defines as follows: “Cited authority supports a proposition different from the main proposition but sufficiently analogous to lend support. Literally, ‘cf.’ means ‘compare.’ The citation’s relevance will usually be clear to the reader only if it is explained. Parenthetical explanations . . . , however brief, are therefore strongly recommended.”\textsuperscript{153} This definition puts a new spin on the see also problem.

\begin{footnotes}{

Whereas the see also definition appears to exert pressure on authors to characterize their strongest authority as clear support, from a deconstructive perspective the cf. signal’s definition contains the premise that authority supporting only “a proposition different from the main proposition” cannot be clear support. This normative judgment denigrates the vital role of analogy in the understanding of law.

The current Bluebook code contains and transmits important messages about legal discourse. Under the guise of ordering signals by weight, the Bluebook subtly urges writers to inflate principal authorities and relegate analogical reasoning to the nether province of makeweight authority. Introductory signals assist in the transmission of complex legal discourse. They should be lighter than air. Or, at the very least, they should not carry this kind of baggage. We should consider a new series of definitions.

B. New Signal Definition and Citation Practice

Clearly what writers need to agree to, in the search for a consistent\textsuperscript{154} and meaningful cf. citation, is a systematized approach to its use. The cf. signal should be used when providing support that is “sufficiently analogous” to the proposition stated.\textsuperscript{155} A general cf. citation to an entire case can lead the reader to create his or her own analogy by searching through the text of the judicial opinion for meaning from the cf. reference, and to speculate about the weight

\textsuperscript{154}Seldom is Emerson’s trenchant warning more appropriate than with regard to signals used in legal discourse: “a foolish consistency is the hobgoblin of little minds.” \textsc{Ralph Waldo Emerson}, Self-Reliance, reprinted in \textsc{2 The Complete Works of Ralph Waldo Emerson} 43, 57 (1903) (emphasis added); see also \textsc{Aldisert}, supra note 40, § 9.2, at 132 (arguing that ensuring consistency in judicial decisionmaking is a key to the value of stare decisis).

\textsuperscript{155}\textsc{Bluebook Sixteen}, supra note 3, Rule 1.2(a). Analogical reasoning underpins the value in, and meaning behind, using introductory signals at all. In fact, analogy “makes possible a new kind of reasoning which leads to an innovative representation.” \textsc{Ladeur}, supra note 40, at 17 (footnote omitted). “[A]nalogy signals a moment of invention, based on the understanding of the concrete situation, which resists the logical-syntactical paradigm of deduction.” \textsc{Id.}, at 18 (footnote omitted). A analogy is governed “by the principle of legal equality, which dictates that different cases with the same essential features are to be disciplined using the same treatment.” \textsc{Giuseppe Zaccaria}, Analogy as Legal Reasoning, in \textsc{Legal Knowledge and Legal Analogy}, supra note 40, at 55 (footnotes omitted).

Zaccaria goes on to discuss the criticism that analogical reasoning is “unscientific because of its insufficient precision.” \textsc{Id.} at 56. Even accepting that perfect precision in any analytical written work is unlikely to be attained, albeit continually striven for, some increased consistency in the forms attached to analogical reasoning can certainly be encouraged. See \textsc{id.}
that any inferred analogy should be given. While this sort of general reference may be the express intention of the legal writer, it is equally likely to mask a more esoteric phenomenon: lack of intellectual rigor in finding support for the main proposition. General cf. citations, or more troubling cf. usage that offers an inaccurate citation to the proposition cited, fosters an atmosphere in which imprecision becomes the byword in the use of the cf. Such a situation is intolerable if the cipher is to be clarified and the law and its development are to have fair meaning. The power of interpretation may well lead to misapprehension and ultimately to signal loss, particularly when the meaning of a citation is obscure and inscrutable. This lamentable eventuality defeats the primary purposes of having signals at all, which are to enable access to materials, to indicate the weight accorded to authority, and to prompt the author and reader to analyze the relevance of citation questions.

156. Ambiguity may be inevitable in judicial decisionmaking; it might also be good. See Halpern, supra note 75, at 41 (presenting as one option in analysis of the Supreme Court’s lack of use of a parenthetical or pinpoint cite in Stone v. Powell, 428 U.S. 465 (1976), that the majority may well have deliberately omitted a clear referent; they may have wanted the lower courts to determine for themselves the factors involved in measuring whether a “full and fair hearing” was given).

This Article focuses on semiotics as a theoretical construct to analyze signals as signs or codes through which legal discourse occurs. Another approach—deconstruction—could provide some explication of deliberate vagueness in citation usage. Deconstruction is “a movement that insists that the gaps and corners and slippages in texts—the words not chosen—are as important to its meaning as the ‘central ideas’ studied in traditional forms of interpretation.” Coombs, supra note 2, at 1100; see also id. at 1100 n.5 (citing Jacques Derrida, Of Grammatology (1976)). Thus cf. usage can be as important for what it does say (when an explanatory parenthetical phrase is added) as for what it does not say (when the citation is left unexplained). Further application of deconstruction to the nuances of cf. practice is beyond the scope of this Article.

157. See supra notes 129-40 and accompanying text (discussing judicial decisions that either use cf. as negative authority or that take that signal completely out of context); see also Metzner, supra note 138, at 170-74 (discussing Butler v. McKellar, 494 U.S. 407 (1990)). This case provides an excellent example of disagreement in interpretation between majority and dissent, such that the latter accuses the former of citing a case out of context. See Butler, 494 U.S. at 419-21. The dissent in Butler believed that the connection between the deterrent function of the exclusionary rule on police and the deterrent function of habeas corpus on state courts was a tenuous one. See id. at 425 n.6 (Brennan, J., dissenting); see also supra note 138 (quoting the dissent at length). Thus, even where a parenthetical is used, it is key that the writer be explicit about the meaning the reader ought to glean from the citation; otherwise, the law remains undefined, and the cipher remains intact.

158. See Weiner, supra note 18, at 223 (analyzing the “virtually cryptographic code” used to signal what weight, if any, should be given to a particular citation); Coombs, supra note 2, at 1105-06, 1110 (depicting the purpose of citations as providing a reference point for further research and claiming that standard citation forms use linguistic ambiguity in order to avoid making strong and exacting analogies); Dickerson, supra note 2, at 69 (stating that authors use
Regarding the cf. signal, Rule 1.2(a) of the sixteenth edition of The Bluebook posits: “The citation’s relevance will usually be clear to the reader only if it is explained. Parenthetical explanations . . . , however brief, are therefore strongly recommended.”

There are at least three possible approaches to tackling the problems inherent in the current state of cf. usage. First, the citation rule could remain exactly as it is. Thus, parentheticals, “however brief,” would continue to be strongly recommended. This solution is inadequate, because it merely recommends and does not mandate parentheticals. It was, in fact, the recommendation in both the fifteenth and sixteenth editions of The Bluebook. Indeed, Lambrix v. Singletary came down from the Supreme Court after the sixteenth edition had already been published, and yet the Court included no parenthetical explanation for its cf. citation. Thus, a strong recommendation still may not address documented signal loss.

The second approach goes one step further. Parenthetical explanations should continue to be strongly recommended; in addition, the recommendation would state that parentheticals should be both relevant and substantive. This rewording would solve many, but not all, of the problems associated with use of the cf. signal. Notably, an author’s intention would be more clearly delineated, which consequently would minimize the searches for meaning undertaken by readers looking for greater precision in judicial decisionmaking. If the writer chose to ignore this strong recommendation, however, the reader again would be in a position to interpret the citation as he or she chose. This reform does not proscribe deliberate vagueness. Rather, it clarifies that unexplained citations actually represent undecided and inconstant elements in the law. But this solution falls short of eliminating the problem caused by current usage of the cf. signal.

This Article recommends a third approach. Parenthetical explanations should not only be both relevant and substantive, but they should also be mandatory. This approach minimizes the disconnect between authors and readers when, for example, a pinpoint citation is given, but no explanation of its relevance is

signals to indicate the weight to be accorded to a given authority). But see Walsh, supra note 5, at 338 (stating that “citations potentially open a window to better understanding of judicial decisionmaking”).

mentioned. Rule 1.2(a) of The Bluebook should explicitly promote this goal of reasoned elaboration, rather than implicitly downplay the role of analogical reasoning in legal discourse.

In accordance with the foregoing discussion, I recommend the following revisions (with additions underlined and deletions indicated) to assist in clarifying the connection between citation signals and analogical legal reasoning. For completeness, I include recommended changes not only for the cf. signal, but also for other signals where appropriate for clarity or consistency. Rule 1.2 should read as follows:

**Introductory Signals**

(a) Signals that indicate support.

[no signal] Cited authority (i) identifies the source of a quotation, or (ii) identifies an authority referred to in text.

**Accord** "Accord" is commonly used when two or more cases clearly support the proposition but the text quotes only one; the others are then introduced by "accord." Similarly, the law of one jurisdiction may be cited as being in accord with that of another.

**See** Cited authority directly states or clearly supports the proposition.

**See also** Cited authority constitutes additional less significant source material that nonetheless clearly supports the proposition. “See also” is commonly used to cite an authority supporting a proposition when the most significant authorities that directly state or directly clearly support the proposition already have been cited or discussed. The use of a parenthetical explanation of the source material’s relevance (rule 1.5) following a citation introduced by “see also” is encouraged strongly recommended.
Cf. Cited authority supports a proposition different from the main proposition but is sufficiently analogous to lend support to the proposition. Literally, “cf.” means compare. Parenthetical explanations (rule 1.5), however brief, are therefore strongly recommended. Should be employed because the citation’s the authority’s relevance will usually be clear to the reader only if it is explained. Unexplained “cf.” citations may be construed generously by the reader.

Compare... [and]... with... [and]... Comparison of the authorities cited will offer support for or illustrate the proposition. The relevance of the comparison will usually be clear to the reader only if it is explained. Parenthetical explanations (rule 1.5) following each authority are therefore strongly recommended.

(e) (b) Signals that indicate contradiction.

But see Cited authority directly states or clearly supports a proposition contrary to the main proposition. “But see” is used where “see” would be used for support.

But cf. Cited authority supports a proposition analogous to the contrary of the main proposition. The use of a parenthetical explanation of the source material’s relevance (rule 1.5) following a citation introduced by “but cf.” is strongly recommended. Parenthetical explanations (rule 1.5), however brief, should be employed because the authority’s relevance will be clear to the reader only if it is explained. Unexplained “but cf.” citations may be construed generously by the reader.

These proposed definitions would obviate many of the problems associated with current cf. usage. The proposed explanation of the cf. signal ties creation of a mandatory parenthetical to the quality of the legal reasoning used.

If the goals of judicial decisionmaking include clarity and avoidance of ambiguity, then controlled ambiguity should be the
byword of opinion writers and Bluebook watchdogs. With controlled ambiguity—in which the writer determines, through explanatory parentheticals, the extent of reliance that he or she intended to convey—I believe that taking the reader through a reasoning process or pointing the reader in the direction in which the writer wants future readers to go will have numerous benefits. It will minimize undue discretion in the hands of the frustrated reader, lead the opinion writer to greater understanding by forcing him or her to justify the reasoning employed, encourage greater adherence by the reader to whatever principle or precedent the writer intended to allude, and ultimately result in a minimization of signal loss.

CONCLUSION

Introductory legal citation signals have been criticized for obscuring, rather than enlightening, the relevance of cited materials. Where a signal is used incorrectly, misapprehension is inevitable. Equally problematic, however, is signal use that leads to unintended ambiguous interpretation by the reader. This Article brings to light how one seemingly trivial legal citation signal, the cf., has been used in judicial decisions—sometimes helpfully, but typically not. Improper usage has led to frustrating (but colorful) commentary from legal writers and thinkers as they try to decipher precedent. For example:

- One can only wonder what proposition ‘sufficiently analogous’ to the quoted proposition derives support from [the precedent cited].

- The temptation to exaggerate a decision with which one disagrees, thereby to make it an easy target for slings and arrows, ought to be resisted.

- The Court’s analogy between the deterrent function of federal habeas and the deterrent function of the exclusionary rule . . . is unsound[;] . . . the majority’s proffered analogy is flawed.

• [The cited case] is not entirely on point, although the Court does not explain what distinction it has in mind.\footnote{165}

• In [a previously cited case], the abbreviation “cf.” preceded cases that were being contrasted.\footnote{166}

• Here, . . . even that notoriously enigmatic signal has been taxed beyond its limits . . . [and the court] view[s] with profound disfavor the . . . attempt to enlist prior holdings in the service of doctrines they in no wise support.\footnote{167}

Given the inconsistent approach to and considerable confusion associated with cf. usage—best exemplified by those cases that actually use the cf. as negative authority, completely ignoring many generations of Bluebook definitions declaring it to be positive authority—the very integrity of legal reasoning by analogy is at stake.

One commentator neatly summarized a constructive approach to improved citation writing: “Sure, there are problems with law review footnotes, but let’s just roll up our sleeves and take care of them.”\footnote{168} The solution to the problems of the cf. signal is mandatory parenthetical explanations or elaborations that are both relevant and substantive. The benefits of this approach, as well as of accurate and consistent signal use generally, are many: jurisprudence is more definite, because explanations for having cited a particular precedent are readily at hand; writers’ intentions are clearer, because an analogy is attached to the cited authority; and readers’ attempts to create their own analogies, or to vary weight assigned to a given citation, are thwarted by the existence of relevant and substantive mandatory parenthetics. These benefits ultimately will result in better guidance to judges, lawyers, and litigants, as well as in a broader understanding of judicial decisionmaking. Most importantly, tightening the definition of the cf. signal, along with the rules for its use, will help to preserve the primary pillar of common law jurisprudence: reasoning by analogy.
