## IDENTITY AND INTEREST OF AMICI CURIAE

Amici curiae are university professors or scholars holding senior positions at independent research institutions. Each amicus has conducted or reviewed empirical research on juries, punitive damages, or both. The interest of the amici in this case is to provide the Court with an accurate summary of empirical research about jury behavior and competence relating to punitive damages. Short biographies of each amicus are provided in Appendix A.<sup>1</sup>

## SUMMARY OF ARGUMENT

Critics of punitive damages have argued that civil jury punitive awards are haphazard and based on biases against large corporations, that the frequency of awards has increased, and that the amounts awarded have increased. They have also asserted that the ratio between punitive and compensatory damages is out of step with guidelines set by this Court, especially in cases involving very large punitive awards. Moreover, often implicitly and sometimes explicitly, critics argue that trial courts and appellate courts do not adequately exercise their powers to control inappropriate punitive awards.

---

<sup>1</sup> Pursuant to this Court's Rule 37, amici state that blanket letters of consent from both parties have been filed with the Clerk of the Court, and pursuant to Rule 37.6, amici state that no counsel for any party authored this brief in whole or in part, and no person or entity, other than amici and their counsel, made a monetary contribution to its preparation and submission. Amici are grateful to Duke University School of Law students Brian D. Hurley, Jennifer L. McGinnis, Matthew W. Wolfe, and Jennifer A. Zimbroff for their invaluable contributions to this brief.

Over the last twenty-five years researchers from government organizations, universities and prestigious research institutions have conducted empirical research bearing on these various claims. The studies overwhelmingly indicate that, contrary to the claims that these critics make, civil juries perform rationally and reasonably.

The research has found that: (1) juries award punitive damages infrequently; (2) punitive damages awards have not increased in frequency; (3) when adjustments are made for inflation the magnitude of such awards has not increased over the past several decades; (4) most awards are modest in size; (5) the overwhelming majority of awards show a rational proportionality between actual and potential harm caused by defendants; (6) the same proportionality relationship between compensatory and punitive damages exists in cases involving large punitive awards; (7) juries pay particular attention to the reprehensibility of defendants' conduct; (8) jury decision-making processes in punitive damages cases are similar to the decision-making processes used by judges in bench trials of such cases; (9) the amounts of punitive awards rendered by juries and judges are similar when adjustments are made for case types; (10) little evidence indicates that juries are biased against large businesses; (11) judges effectively exercise supervision over punitive damages in post-verdict motions or on appeal; and (12) in other instances post-verdict settlements reduce or abandon punitive awards without judicial intervention.

These empirical findings strongly undermine the Petitioner's premise that additional due process limits in

punitive damages cases are needed. Jury decision-making comports with the criteria that this Court has enunciated in *State Farm Mut. Auto Ins. Co. v. Campbell*<sup>2</sup> and other leading cases.

## ARGUMENT

### I. **Juries Perform Rationally and According to Legal Principles When Assigning Punitive Damages.**

This Court has outlined three criteria that should guide decision-making about punitive damages. *State Farm Mut. Auto Ins. Co. v. Campbell* states that “[T]he most important indicium of the reasonableness of punitive damages is the degree of reprehensibility of the defendant’s conduct.”<sup>3</sup> Elaborating further, this Court said:

We have instructed courts to determine the reprehensibility of a defendant by considering whether: the harm caused was physical as opposed to economic; the tortious conduct evinced an indifference to or a reckless disregard of the health or safety of others; the target of the conduct had financial vulnerability; the conduct involved repeated actions or was an isolated incident; and the harm was the result of intentional malice, trickery, or deceit, or mere accident.<sup>4</sup>

---

<sup>2</sup> *State Farm Mut. Auto Ins. Co. v. Campbell*, 538 U.S. 408 (2003).

<sup>3</sup> *Id.* at 420 (quoting *BMW of N. Am., Inc. v. Gore*, 517 U.S. 559, 575 (1996)).

<sup>4</sup> *Id.*

The second criterion is the relationship between compensatory and punitive damages. Although there can be “no bright-line ratio,” few awards exceeding a single digit ratio will satisfy due process.<sup>5</sup> The third criterion involves the relationship between the punitive damages and civil penalties authorized or imposed in comparable cases that might be subject to criminal penalties. This brief addresses only the first two criteria since the third criterion involves legal judgment beyond the purview of jury decisions.

Twenty-five years of empirical research lead to the conclusion that, with rare individual exceptions, jury behavior is consistent with this Court’s criteria. Punitive damages are rendered in only a small percentage of cases, mostly for intentional torts and fraud; the frequency and amounts of punitive damage awards have not changed over the past several decades; punitive to compensatory ratios are typically modest; juries and trial judges decide punitives using similar criteria, putting especial emphasis on the reprehensibility of the defendant’s behavior.

#### **A. Juries Rarely Award Punitive Damages.**

The “Civil Justice Survey of State Courts,” a joint project of the U.S. Department of Justice’s Bureau of Justice Statistics and the National Center for State Courts systematically collected data directly from clerks’ offices in

---

<sup>5</sup> *State Farm*, 538 U.S. at 426. See also *Pacific Mutual Life Ins. Co. v. Haslip*, 499 U.S. 1, 22 (1991) (upholding a punitive damages award “more than 4 times the amount of compensatory damages [and] more than 200 times the out-of-pocket expenses of” the plaintiff).

forty-six state courts of general jurisdiction covering three periods: 1991-92, 1996, and 2001.<sup>6</sup> These data sets are representative of the seventy-five most populous counties in the United States. The Bureau of Justice Statistics findings lead to the estimate that punitive damages are awarded in less than one percent of all civil actions commenced during each of these three periods.<sup>7</sup> In 2001 juries awarded punitive damages in only 5.7 percent of tort and contract cases when the plaintiff prevailed at trial.<sup>8</sup>

Eaton et al. recently reviewed a number of databases to conclude that “for every 1000 tort claims filed, typically only 50 or more are resolved by trial, only 25 produce trial

Rev. 975, 981–92 (1995) (concluding that punitive damages are rarely awarded in medical malpractice cases) [hereinafter “Rustad & Koenig, *Reconceptualizing*”].

<sup>16</sup> For example, a 2000 Georgia study concluded that “punitive damages currently are not a significant factor in personal injury litigation in Georgia.” Thomas A. Eaton et al., *Another Brick in the Wall: An Empirical Look at Georgia Tort Litigation in the 1990s*, 34 Ga. L. Rev. 1049, 1094 (2000). A Florida study found that frequency of punitive damages awards to be “strikingly low.” Neil Vidmar & Mary R. Rose, *Punitive Damages by Juries in Florida: In Terrorem and in Reality*, 38 Harv. J. Legis. 487, 487 (2001). See also Stephen Daniels & Joanne Martin, *Myth and Reality in Punitive Damages*, 75 Minn. L. Rev. 1, 31 (1990) (1,287 cases involved punitive awards out of the 25,627 civil jury verdicts studied.); Deborah Jones Merritt & Kathryn Ann Barry, *Is the Tort System in Crisis? New Empirical Evidence*, 60 Ohio St. L.J. 315, 388 (1999) (no punitive awards in medical malpractice or products liability cases in a twelve-year period in Franklin County, Ohio); Neil Vidmar, *Medical Malpractice and the American Jury* 254 (1995) (two punitive awards in 1,300 North Carolina medical malpractice cases); Eisenberg et al., *The Relation between Punitive and Compensatory Awards: Combining Extreme Data with the Mass of Awards, in Civil Juries and Civil Justice: Psychological and Legal Perspectives* (Brian Bornstein et al. eds., forthcoming 2007), available at <http://ssrn.com/id=929565> (“Multiple studies establish that punitive damages are rarely awarded. . . .”) [hereinafter “Eisenberg et al. 2007”].

These findings strongly indicate that juries are very selective in awarding punitive damages.

### **B. The Incidence of Punitive Damages Has Not Increased.**

The most recent Bureau of Justice Statistics study showed that in 2001 plaintiffs received punitive damages in 5.6 percent of jury trials in which plaintiffs prevailed, compared to 6.1 percent in 1992. While this difference is not statistically significant, it is in a direction *opposite* to claims that punitive damages are increasing.<sup>17</sup> In contract cases the percentage of punitive awards declined from 12.9 percent in 1992 to 10.1 percent in 2001, a difference that is statistically significant.<sup>18</sup> The number of punitive damage awards for \$1 million or more was 13.9 percent in 2001 versus 12.2 percent in 1992.<sup>19</sup> The small increase in the percent of million dollar awards was not statistically significant.

Strikingly, Rustad's review of earlier studies yielded a similar conclusion.<sup>20</sup> His research indicated that, with the exception of asbestos cases, punitive damages were in decline beginning at the end of the 1970s.<sup>21</sup>

In a recently completed study Eisenberg, Hans, and Wells investigated the relationship between punitive and

---

<sup>17</sup> Bureau of Justice Statistics March 2005, *supra* note 6, at 8 tbl.9.

<sup>18</sup> *Id.*

<sup>19</sup> *Id.*

<sup>20</sup> Michael Rustad, *In Defense of Punitive Damages in Product Liability: Testing Tort Anecdotes with Empirical Data*, 78 Iowa L. Rev. 1, 36–39 (1992).

<sup>21</sup> *Id.* at 37–38.

compensatory damages by combining the Bureau of Justice Statistics data for 1992, 1995, and 2001 with data on large awards collected by Hersch and Viscusi and with data on large awards collected by the *National Law Journal*.<sup>22</sup> Analyses showed no noticeable increase in either compensatory or punitive damages for any of the three sets of data.

In short, jury critics' claim that punitive damages are on the increase is not supported by hard data.

### **C. Punitive Damages Are Primarily Awarded in Cases Involving Intentional Torts and Fraud.**

Empirical data consistently show that punitive damages are rare in product liability and medical malpractice cases. For example, the Bureau of Justice Statistics data show that in 2001, among the nation's seventy-five largest counties there were only three punitive damage awards out of a total of seventy product liability cases in which plaintiffs prevailed (two of the three cases involved asbestos) and fifteen awards out of 311 medical malpractice cases.<sup>23</sup> These findings are consistent with other studies.<sup>24</sup>

Rustad's review of empirical studies on punitive damage awards concluded that the biggest growth area for large punitive damages was not in personal injury, but in

---

<sup>22</sup> Eisenberg et al. 2007, *supra* note 16.

<sup>23</sup> Bureau of Justice Statistics April 2004, *supra* note 6, at 6 tbl.7.

<sup>24</sup> *E.g.*, Rustad & Koenig, *Reconceptualizing*, *supra* note 15.

business and contract litigation involving economic harm resulting from opportunistic business practices.<sup>25</sup>

Vidmar and Rose's examination of punitive awards against businesses led them to conclude that:

punitive damages against businesses all tended to involve allegations of either a knowing and active disregard for the law – e.g. illegal toxic dumping, allowing minors to have alcohol, falsely reporting inspections – or misconduct by people in senior positions – e.g., a ship's captain, a business owner, corporate executives. In short, these cases rarely involved businesses engaging in commonly accepted practices or those having taken normal precautions for safety.<sup>26</sup>

The Bureau of Justice Statistics data indicate that in 2001, punitive damages were most likely to be awarded in cases involving slander/libel, intentional torts and false arrest/imprisonment. In contract cases punitive damages were most likely to be awarded in partnership disputes, employment discrimination and fraud.<sup>27</sup>

#### **D. Punitive Damages Tend to Be Modest and To Be Positively Correlated with Compensatory Damages.**

In *BMW of N. Am., Inc. v. Gore*<sup>28</sup> and *State Farm Mut. Auto Ins. Co. v. Campbell*<sup>29</sup> this Court, while reluctant to

---

<sup>25</sup> Rustad, *supra* note 10, at 37–39.

<sup>26</sup> Vidmar & Rose, *supra* note 16, at 499.

<sup>27</sup> Bureau of Justice Statistics April 2004, *supra* note 6, at 5. These figures include both jury and bench trials.

<sup>28</sup> *BMW of N. Am., Inc. v. Gore*, 517 U.S. 559, 581 (1996).

establish concrete constitutional limits, suggested that the ratio between punitive damages and the actual harm and potential harm to the plaintiff or non-parties should ordinarily not exceed a single digit.

The empirical findings show the damages awarded by juries and upheld by courts are in line with this Court's directives. The Bureau of Justice Statistics data for 2001 show that the median inflation-adjusted punitive award when plaintiffs prevailed was only \$50,000, compared with \$63,000 in 1992.<sup>30</sup>

In a study covering nine states, Daniels and Martin found that, in fifteen of twenty counties that had more than ten punitive verdicts, the median punitive award was below \$40,000.<sup>31</sup>

In a sample of Florida cases involving both personal injury and business disputes covering the years from 1989 through 1998 Vidmar and Rose found that the median punitive award was only seventy percent of the compensatory award.<sup>32</sup>

Rustad's study of 355 product liability cases involving punitive damages over a twenty-five year period yielded a conclusion that the median ratio of punitive damages to

---

<sup>30</sup> Bureau of Justice Statistics March 2005, *supra* note 6, at 8 tbl.9.

<sup>31</sup> Steven Daniels & Joanne Martin, *Myth and Reality in Punitive Damages*, 75 Minn. L. Rev. 1, 41-42 (1990).

<sup>32</sup> Vidmar & Rose, *supra* note 16, at 501 tbl.3.

compensatory damages awarded at trial was 1.67 to 1.<sup>33</sup> Compensatory damages were actually higher than punitive damages in fully thirty-six percent of the cases.<sup>34</sup> Rustad further concluded that when the awards were adjusted for inflation there was “virtually no change in the size of verdicts.”<sup>35</sup> Finally, the data showed that “[a]lthough the ratio of compensatory to punitive damages was admittedly higher in a small number of awards, the pattern was that punitives are proportionate to actual damages.”<sup>36</sup>

Eisenberg et al. analyzed a nationwide sample of punitive damage awards plus samples of cases from Illinois and California. Those authors found a strong and statistically significant correlation between compensatory damages and punitive awards.<sup>37</sup> Similar correlations were found in the GAO study,<sup>38</sup> the RAND study,<sup>39</sup> and other studies.<sup>40</sup> Additionally, Eisenberg et al. found no evidence

<sup>40</sup> Jonathan M. Karpoff & John R. Lott, *On the Determinants and Importance of Punitive Damage Awards*, 42 J.L. & Econ. 527, 543 (1999).

that punitive awards are more likely when individuals sue businesses than when individuals sue individuals.<sup>41</sup>

Eisenberg, Hans and Wells further investigated the relationship between punitive and compensatory damages in their combined data sets involving the Bureau of Justice Statistics data for 1992, 1995 and 2001, the data on large awards collected by Hersch and Viscusi, and the data on large awards collected by the *National Law Journal*.<sup>42</sup> The data showed that large punitive awards are almost never given in cases with small compensatory awards. Further, the analyses demonstrated a strong, significant positive correlation between punitive and compensatory awards.

#### **E. “Blockbuster” Cases: Punitive Damages Also Correlate with Compensatory Damages.**

While essentially conceding that, overall, punitive damages positively correlate with compensatory damages, a study by Hersch and Viscusi examined cases with punitive awards equaling or exceeding \$100 million (“blockbuster awards”) and claimed to have found that “blockbuster awards are not correlated with compensatory damage awards.”<sup>43</sup>

Eisenberg and Wells challenged the Hersch and Viscusi conclusions by drawing attention to major flaws in their

---

<sup>41</sup> Eisenberg *supra* note 37, at 639–40, 646.

<sup>42</sup> Eisenberg et al. 2007, *supra* note 16.

<sup>43</sup> Joni Hersch & W. Kip Viscusi, *Punitive Damages: How Judges and Juries Perform*, 33 J. Legal Stud. 1, 2, 34 (2004).

statistical methodology.<sup>44</sup> Using correct methodologies and appropriate statistical analyses, Eisenberg and Wells recalculated the data involving every known punitive award equal to or in excess of \$100 million occurring between 1985 and 2003. They found a strong, statistically significant relationship between punitive and compensatory awards: the larger the punitive award, the larger the compensatory award. Eisenberg and Wells thus demonstrated that, contrary to the Hersch and Viscusi conclusion, “Blockbuster punitive awards, like other punitive awards, show a strong association with compensatory awards.”<sup>45</sup>

The subsequent Eisenberg, Hans and Wells study also concluded that there was no evidence showing an increase over time in so-called blockbuster awards.<sup>46</sup>

In short, there is a positive, statistically reliable relationship between compensatory and punitive awards for cases involving very large punitive awards as well as the overwhelming bulk of cases with more modest verdicts.

#### **F. Juries and Judges Use Similar Criteria in Deciding Punitive Damages.**

One way to assess the responsibility and fairness of the punitive damage awards of juries is to compare jury awards to awards made by judges when cases are tried in

---

<sup>45</sup> *Id.* at 194.

<sup>46</sup> Eisenberg et al. 2007, *supra* note 16.

bench trials. A recent study by Eisenberg et al. has done just that.<sup>47</sup> Drawing upon the data collected by the Bureau of Justice Statistics in 1992, 1995 and 2001 Eisenberg et al. compared awards made by juries with awards made by judges.<sup>48</sup> There were 11,610 cases in the total sample and punitive awards were made in 539 cases with non-zero compensatory awards, 438 (81.3 percent) made by juries and 101 (18.7 percent) made by judges.<sup>49</sup> The researchers examined (a) the relationship between compensatory damages and punitive damages and (b) the rates at which judges versus juries awarded damages. There is, of course, a problem of case selection: judges and juries hear different types of cases. However, to the extent possible, these differences were taken into account in the analyses.

Statistical regression analyses indicated that juries and judges awarded about the same amount of punitive damages per dollar of compensatory damages. Eisenberg et al. concluded that there was “no substantial evidence that judges and juries behave differently in any meaningful and systematic manner.”<sup>50</sup>

Eaton et al. studied over 25,000 civil cases filed in state and superior courts in Georgia.<sup>51</sup> They concluded that

---

“[a]fter controlling for other factors, juries in Georgia are not more likely than judges to award punitive damages.”<sup>52</sup>

A study by Robbennolt complements the Eisenberg and Eaton et al. findings while avoiding the problem of juries and judges deciding different cases.<sup>53</sup> Robbennolt asked eighty-seven federal and state trial court judges and 140 jury-eligible citizens to respond to a description of a lawsuit, which involved an injury resulting from an HMO policy prescribing a particular medication despite an internal memo indicating potential side effects. The outcome was described as either moderate or severe; the wealth of the HMO was also varied. Each participant was provided with one version of the incident and asked to recommend compensatory and punitive damages. Robbennolt found that the decision making of judges and citizens with regard to punitive damage awards was quite similar. The severity of the plaintiff’s injury influenced compensatory awards, but both actual and potential injury combined to influence punitive damage awards among both judges and juries.<sup>54</sup> When the defendant’s actions were perceived to be more offensive jurors and judges tended to award more punitive damages. Robbennolt concluded that the recommended punitive damages of juries and judges “were influenced by the same factors and were of similar magnitude.”<sup>55</sup>

---

<sup>55</sup> *Id.* at 336.

In short, the decision-making of juries in awarding punitive damages was found to be similar to the decision-making of trial judges.

### **G. Other Research Supports and Complements the Findings Cited Above.**

Experimental studies on punitive damages have found that the severity of the injury caused to the plaintiff, or the potential harm that the defendant's actions may have caused or the reprehensibility of the defendant's behavior influenced punitive awards.<sup>56</sup>

Greene and her colleagues studied the decisions of jury-eligible citizens and students in a series of experiments that used case scenarios involving personal injury, products liability, insurance bad faith, automobile negligence and medical malpractice. The jurors tended to award greater damages when the defendants had acted in a reprehensible manner.<sup>57</sup>

---

<sup>56</sup> For a general review of these studies, see generally Jennifer Robbennolt, *Determining Punitive Damages: Empirical Insights and Implications for Reform*, 50 Buffalo L. Rev. 103 (2002) and Edith Greene & Brian Bornstein, *Determining Damages: The Psychology of Jury Awards* (2003). An experiment by Corrine Cather et al., *Plaintiff Injury and Defendant Reprehensibility: Implications for Compensatory and Punitive Damage Awards*, 20 Law & Hum. Behav. 189, 201-02 (1996), did not find an effect of severity on punitive damage awards, but the result may have been due to problems in the case materials presented to the participants.

Behav. 189, 201 (2005); Edith Greene et al., *Compensating Plaintiffs and Punishing Defendants: Is Bifurcation Necessary?*, 24 Law & Hum. Behav. 187, 196 (2000); Edith Greene et al., *The Effects of Defendant Conduct on Jury Damage Awards*, 86 J. Applied. Psychol.

(Continued on following page)

Kahneman et al. asked citizens to evaluate a series of personal injury claims and rate the outrageousness of the conduct, the appropriate level of punishment or to make a punitive damage award. Larger punitive damages were awarded when the injury was rated as more severe.<sup>58</sup>

Horowitz and Bordens conducted a complex simulation experiment, finding that the earlier the defendants should have been aware of the harmful effects, the greater the award.<sup>59</sup> In another experiment, those authors found that the amounts of the punitive award increased when the potential plaintiff population involved hundreds of potential victims.<sup>60</sup>

Some studies have found that the wealth of the defendant is correlated with the size of the punitive award.<sup>61</sup> This should not be surprising, nor inappropriate. In 1869, the Maine Supreme Judicial Court in *Goddard v.*

*Grand Trunk Railway*<sup>62</sup> concluded that large punitive damages against a corporation served an “impressive lesson.”<sup>63</sup>

Despite the obvious logic of making the wealthy pay more to achieve commensurate punishment, research indicates that jurors take defendant wealth into account in a responsible way rather than in the irresponsible way that critics of juries often attribute to them.<sup>64</sup> Hans conducted systematic, in-depth interviews with jurors who had recently decided cases involving business corporation defendants and rendered punitive awards.<sup>65</sup> The interviews revealed that juries took the wealth of the corporation into account, but they did not do so casually. Jurors viewed larger corporations as capable of paying more than smaller corporations, but at the same time did not want to excessively harm them financially. Hans concluded that “[j]urors’ remarks reflect concern about emptying a corporate defendant’s pockets, ruining a business through high awards. Other comments indicate that jurors in punitive damage cases consider the deterrent impact of an award.”<sup>66</sup>

The desire to punish reprehensible behavior commensurate with harm or potential harm appears to be the primary, indeed, the controlling motive, behind jury awards of punitive damages.

## H. Reprehensible Behavior Evokes Strong Societal Condemnation.

The fact that punitive damages are most likely to be awarded in cases involving intentional torts and fraud, especially when the harm or potential harm is very serious or the defendant's behavior is judged as reprehensible, should not be surprising. In 1893, Emile Durkheim, one of the fathers of modern sociology, observed that harms to an individual victim evoked strong reactions in communities because they violate widely shared societal norms about behavior, thus making everyone a victim.<sup>67</sup> Galanter and Luban have argued that punitive damages primarily serve to emphasize the norms and important values implicit in laws proscribing fraud or other reprehensible behavior.<sup>68</sup> Sebok has shown that in the nineteenth-century the primary function of punitive damages was for punishment and vindication.<sup>69</sup>

Robbennolt, Darley, and MacCoun also drew attention to the retributive role that punitive damages play in restoring the values implicit in laws proscribing intentional civil misconduct.<sup>70</sup> Sunstein noted that laws have

“expressive” functions that incorporate important social values.<sup>71</sup>

An experiment by Anderson and MacCoun presented simulating jurors with personal injury cases and the option of awarding the punitive damages to the individual plaintiff or to the state. Contrary to many people’s intuitions, the jurors were more likely to award the damages to the plaintiffs rather than the state, causing the authors to conclude that punitive damages serve a restorative function, advancing the breach caused by the defendant’s reprehensible actions.<sup>72</sup>

### **I. Exxon-Funded Research Does Not Provide Credible Grounds For Concluding That Juries Are Incompetent.**

A series of jury simulation studies funded by the Exxon Corporation in the wake of the punitive award

---

*Goal Managers*, 68 Brook. L. Rev. 1121, 1142–44 (2003). Although arguing for treating punitive damages as a form of compensatory damages, Sharkey’s concept of punitive damages as “societal damages,” Catherine Sharkey, *Punitive Damages as Societal Damages*, 113 Yale L.J. 347, 393–99 (2003), has drawn attention to the fact that in many punitive damages cases the harm is not just to the individual plaintiff or plaintiffs in a lawsuit but also to persons who were harmed but were not part of the lawsuit (“absent plaintiffs”) but others who could potentially be harmed as a result of the violations of the law (“quasi-plaintiffs”). *Id.*

L. Rev. 382, 385 (2003) (“A fuller examination of Sunstein et al.’s empirical work reveals the

(Continued on following page)

*Damages* essentially ignored or misstated real world findings that contradicted or were inconsistent with their own experimental findings, used experimental materials that were biased or required participants to make legal versus fact decisions and failed to adequately recognize the limitations of the experiments.

Although some of the experiments from *Punitive Damages* yield interesting and useful insights about juror decision-making, the studies do not provide a sufficient basis to make broad claims that juries are incompetent or erratic in awarding punitive damages.

## **II. Judges Adequately Exercise Oversight Of Punitive Jury Awards and Post-Verdict Settlements Often Reduce Awards.**

As noted earlier, one of the arguments against punitive damages is that trial courts are not using their powers to supervise jury verdicts. While there are instances in which juries arguably render verdicts that are excessive,

---

indeterminacy—and possible inapplicability—of that research with respect to broader nonretributive theories of punitive damages. What this reveals, more generally, is the contingent nature of Sunstein et al.’s conclusions, and the implicit, and perhaps erroneous, assumptions that underlie their policy prescriptions.”); Neil Vidmar, *Experimental Simulations and Tort Reform: Avoidance, Error and Overreaching in Sunstein et al.’s Punitive Damages*, 53 Emory L.J. 1359, 1403 (2004) (“[I]t is abundantly clear that *Punitive Damages* should not be treated as empirical authority for individual cases or for tort reform generally.”) Neil Vidmar, *Juries Don’t Make Legal Decisions! And Other Problems: A Critique of Hastie et al. on Punitive Damages*, 23 Law & Hum. Behav. 705, 712 (1999) (“I am disturbed by the article, not only because of the legal errors, misstatements, and unsupported assertions that it contains, but by the authors’ attempt to draw largely unqualified policy implications.”).

research shows that judges frequently exercise *remittitur* or reverse verdicts.

Rustad has pointed out that individual states provide methods for reviewing the excessiveness of punitive damage awards.<sup>77</sup> These standards include “passion or prejudice” and “shock the conscience” tests.<sup>78</sup>

The General Accounting Office study of product liability cases rendered between 1983 and 1985 in five states found post-trial reductions in eighty-two percent of punitive damages verdicts.<sup>79</sup>

A RAND study of awards in Cook County, Illinois and San Francisco, California concluded that for awards amounting to \$1 million or more, reductions amounted to almost forty percent.<sup>80</sup>

Landes and Posner found that federal appellate courts reversed or remanded the majority of punitive awards, and in state trials, punitive damages were of “relative insignificance” in the area of products liability.

Viscusi reached a similar conclusion about products liability cases, finding that only twenty-nine percent of the

<sup>79</sup> U.S. General Accounting Office, Report to the Chair, Subcommittee on Commerce, Consumer Protection and Competitiveness, Committee on Energy and Commerce, House of Representatives, *Product Liability: Verdicts and Case Resolution in Five States*, GAO/HRD-89-99, at 42 (1989).

<sup>80</sup> Michael Shanley & Mark Peterson, *Posttrial Adjustments to Jury Awards* 29 (1987).

punitive award was paid.<sup>81</sup> Of particular note, the “block-buster” punitive awards studied by Hersch and Viscusi are regularly reduced.<sup>82</sup>

Empirical research further indicates that the damage awards are also reduced in post-verdict settlements without the need for judicial intervention.

Rustad examined the post-trial outcomes of punitive damages verdicts rendered between 1965 through 1990.<sup>83</sup> Almost forty percent of the cases were settled between the parties. Thirty-two percent were reduced or reversed by the trial judge or an appellate court. Twenty-five percent of cases were affirmed upon appeal.<sup>84</sup> No punitive damages

<sup>81</sup> W. Kip Viscusi, *Reforming Products Liability* 94 (1991).

<sup>82</sup> *E.g.*, *IGEN Intern., Inc. v. Roche Diagnostics GmbH*, 335 F.3d 303 (4th Cir. 2003) (reducing award of about \$505 million by over 90 percent); *50-Off Stores, Inc. v. Banques Paribas (Suisse), S.A.*, 180 F.3d 247 (5th Cir. 1999) (Jury awarded in excess of \$150 million in compensatory, consequential, and punitive damages; punitive award struck on appeal.); *Pioneer Commercial Funding Corp. v. American Financial Mortg. Corp.*, 855 A.2d 818 (Pa. 2004) (striking large jury award); *COC Services, Ltd. v. CompUSA, Inc.*, 150 S.W.3d 654 (Tex. App. 2004) (striking large punitive damages award); *Amoco Chemical Co. v. Certain Underwriter's at Lloyd's of London*, 1996 WL 407855 (Cal. App.) (reversing large jury award). In *MMAR Group, Inc. v. Dow Jones & Co.*, 987 F.Supp. 535 (S.D. Texas 1997), a jury awarded \$220,720,000 in compensatory and punitive damages. A retrial was ordered based on plaintiff discovery abuse, *see* Felicity Barringer, *Judge Says Record Libel Case Should Be Retried*, N.Y. Times, Apr. 9, 1999, at C1, and it is reported that MMAR eventually chose not to pursue the case, David McHam, *Law & the Media in Texas: Handbook for Journalists*, available at <http://www.texaspress.com/Lawpress/LawMedia/Libel/TexasLibelCases.htm>.

<sup>83</sup> Michael L. Rustad, *In Defense of Punitive Damages in Product Liability: Testing Tort Anecdotes with Empirical Data*, 78 Iowa L. Rev. 1, 54–59 (1992).

<sup>84</sup> *Id.* at 55.

were paid in forty-six percent of cases and some of the award was paid in fourteen percent of the cases. The full award was paid forty percent of the time.<sup>85</sup>

Rustad and Koenig found that in the relatively rare instances in which punitive damages were given in medical malpractice cases, in more than 40 percent of such cases the awards were reversed on appeal, settled or were not collectable due to defendant insolvency.<sup>86</sup>

Karpoff and Lott sampled almost two thousand cases involving claims for punitive damages that covered the broad spectrum from which punitive damage claims arise and found that post-verdict settlements were substantial.<sup>87</sup> The mean post-verdict punitive award settlement was never more than seventeen percent of the mean punitive award; in many types of cases punitive awards were never a factor in the settlements.<sup>88</sup>

Vidmar and Rose identified the twenty largest awards in their sample of Florida cases.<sup>89</sup> They concluded that at least half of the awards resulted either in no payment or a reduced payment.

In summary, there is very strong evidence of judicial supervision of punitive awards. Post-verdict settlement negotiations are another common mechanism through which punitive damages are adjusted downward or not paid at all.

## CONCLUSION

Critics of punitive damages assert that juries are irresponsible, incompetent and biased in awarding damages and imply that trial and appellate courts do not adequately supervise or control punitive awards. Hard empirical data say otherwise on both issues.

American juries render punitive damages competently and responsibly and in a manner similar to decisions of experienced trial judges. Moreover, the data indicate that jury verdicts are rendered in accord with this Court's concern in *State Farm* and earlier cases that the principal criterion for punitive damages should be the reprehensibility of the defendant's behavior. Solid and extensive empirical facts should always trump anecdotes and innuendo. The empirical facts indicate that there is no need for this Court to impose additional federal constitutional due process standards on state punitive damages laws.

For the following reasons, the *amici* request that the decision below be affirmed.

Respectfully submitted,

*Counsel for Amici Curiae*

**APPENDIX**

**Neil Vidmar** is Russell M. Robinson II Professor of Law, Duke Law School, and Professor of Psychology at Duke University. He holds a Ph.D. in social psychology from the University of Illinois (1967) and conducts empirical studies on issues in the legal system, including the subject of punitive damages. He is co-author of *Judging the Jury* (1986), author of *Medical Malpractice and the American Jury* (1995) and editor and author of *World Jury Systems* (2000). Vidmar has published more than 100 articles in law reviews and social science journals (e.g. Stanford Law Review; Brooklyn Law Review; Law & Human Behavior; Law & Society Review; Harvard Journal on Legislation; Duke Law Journal). He reviews research proposals for the National Science Foundation and is a current or past member of the following editorial boards of peer review journals: Law & Human Behavior; Law & Society Review; Law & Social Inquiry; Journal of Applied Social Psychology; Psychology Crime & Law; and Legal & Criminological Psychology; Psychology, Public Policy & Law; and the Journal of Empirical Legal Studies.

**Brian Bornstein** is Professor of Psychology, University of Nebraska-Lincoln, and Courtesy Professor of Law, University of Nebraska-Lincoln, where he is Associate Director of the law-psychology program. He holds a Ph.D. in experimental psychology from the University of Pennsylvania (1991) and a Master of Legal Studies (MLS) from the University of Nebraska (2001). He has conducted and published research on juries in peer review journals and has received funding from the National Science Foundation for this research. He is co-author of the book *Determining Damages: The Psychology of Jury Awards* (2003) and has published more than 50 articles in social science

journals and law reviews (e.g., *Law and Human Behavior*; *Behavioral Sciences & the Law*; *Law & Psychology Review*; *Psychology, Crime and Law*; *Journal of Medicine and Law*; and *Florida State University Law Review*). He reviews research proposals for the National Science Foundation and numerous journals and is a current member of the *Law & Human Behavior* editorial board.

**Kevin M. Clermont** is the Flanagan Professor of Law at Cornell Law School, where he has taught since 1974. He has also served as a visiting professor at Harvard Law School. He received his J.D. from Harvard and his A.B. from Princeton University. He is the author of numerous articles on civil procedure, as well as multiple books, including *Principles of Civil Procedure* (2005) and *Civil Procedure* (7th ed. 2004). His published research includes several empirical articles on the civil jury.

**Stephen Daniels** is a Senior Research Fellow at the American Bar Foundation in Chicago, IL, and an Adjunct Professor of Political Science at Northwestern University. He holds a Ph.D. in political science from the University of Wisconsin-Madison. His research focuses on law and public policy and the various aspects of the American civil justice system. He has written on trial courts, juries, plaintiffs' lawyers, and the politics of civil justice reform – including the areas of medical malpractice, products liability, and punitive damages. He is co-author (with Joanne Martin) of *Civil Juries and the Politics of Reform* (Northwestern University Press, 1995), and author or co-author of numerous articles in law reviews (e.g., *Texas Law Review*; *Minnesota Law Review*; and *Wisconsin Law Review*) and social science journals (e.g., *Law & Society Review*; *Law & Policy*; and *Justice System Journal*) focusing on law and public policy. He reviews research

proposals for the National Science Foundation and manuscripts for peer reviewed journals in the law and society field and in political science. He is a current member of the editorial board for Justice System Journal, a peer-reviewed journal.

**Thomas A. Eaton** is the J. Alton Hosch Professor at the University of Georgia School of Law where he has taught for more than twenty years. He has published articles on his empirical research on punitive damages and tort litigation in the Georgia Law Review, the Yale Law and Policy Review, the Yale Journal on Regulation, and the Journal of Legal Studies.

**Theodore Eisenberg** is the Henry Allen Mark Professor of Law at Cornell Law School. He graduated from Swarthmore College and the University of Pennsylvania Law School. He clerked for a federal appellate court and for Chief Justice Earl Warren (ret.). He has taught at UCLA, Harvard, and Stanford law schools. He is a Fellow of the Royal Statistical Society, serves on the Board of Directors of the American Law and Economics Association, and is a member of many professional associations. He is co-editor of the Journal of Empirical Legal Studies, is on the editorial board of American Law and Economics Review, is Editor-in-Chief of the multi-volume treatise Debtor-Creditor Law, and has written two casebooks. Professor Eisenberg's empirical studies have appeared in many leading peer-reviewed journals (e.g., Journal of the Royal Statistical Society; Journal of the American Statistical Association; Journal of Financial Economics; and Journal of Legal Studies) and student law reviews (e.g., Harvard Law Review; Cornell Law Review; Stanford Law Review; and University of Chicago Law Review) and books, and cover civil rights, finance, products liability,

punitive damages, judge and jury trials, the death penalty, class actions, and litigation models.

**Solomon M. Fulero** is Professor of Psychology at Sinclair College, and Clinical Assistant Professor of Psychology at Wright State University, School of Medicine, Department of Psychiatry, both in Dayton, Ohio. He received a Ph.D. in Psychology from the University of Oregon in August 1979 and his J.D. from the University of Oregon School of Law in December 1979. He is both a licensed psychologist and an attorney. He is a Fellow of the American Psychological Association, and President-Elect of the American Psychology-Law Society (APA Division 41), the major organization for the field of legal psychology. Dr. Fulero is Associate Editor of *Law and Human Behavior*, and is on the editorial board or is a reviewer for many other journals. He has published numerous articles in scholarly journals and law reviews, primarily on topics related to legal psychology, including jury behavior and eyewitness testimony. He is co-author of one of the leading texts in psychology and law, *Wrightsmen and Fulero, Forensic Psychology*, 2nd Edition. His work has been cited by the U.S. Supreme Court in *United States v. Atkins*, and in other legal decisions.

**Marc Galanter** is John and Rylla Bosshard Professor Emeritus of Law and South Asian Studies at the University of Wisconsin-Madison and LSE Centennial Professor at the London School of Economics. He received degrees in philosophy and law from the University of Chicago. In addition to the University of Wisconsin and the London School of Economics, he has taught at Chicago, Buffalo, Columbia and Stanford. From 1990 to 1998, he was Director of Wisconsin's Institute for Legal Studies, one of the leading centers for empirical study of the legal system. He is the author of five books and over one hundred

articles on litigation, lawyers and legal culture, including articles on jury trials and on punitive damages. He has been editor of the *Law & Society Review*, President of the Law and Society Association, Chair of the International Commission on Folk Law and Legal Pluralism, a member of the Council on the Role of Courts, a Guggenheim Fellow, and a Fellow of the Center for Advanced Study in the Behavioral Sciences. He is a member of the American Law Institute and a Fellow of the American Academy of Arts and Sciences.

**Edith Greene** is Professor of Psychology at the University of Colorado in Colorado Springs. Her research focuses on decision making by jurors and juries, including work on punitive damages decision making. She received a B.A. from Stanford University (1975) and a Ph.D. in psychology and law from the University of Washington (1983). She has served as Fellow in Law and Psychology at Harvard Law School, a faculty member at the National Judicial College, and as lecturer to lawyers and judges nation-wide. She has been awarded Fellow status by the American Psychological Association and the Association for Psychological Science, and is the recipient of several research grants and awards. She is the author or co-author of many articles in law reviews and psychology journals and three books about psychology applied to the legal system, including *Determining Damages: The Psychology of Jury Awards* (2003). Greene serves on the editorial boards of *Law and Human Behavior* and *Psychology, Public Policy and Law* and is a past-president of the American Psychology-Law Society

**Valerie P. Hans** is Professor of Law at Cornell Law School. She holds a Ph.D. in Psychology from the University of Toronto. She conducts empirical studies of law and

is one of the nation's leading authorities on the jury system. She has carried out extensive research and lectured and written widely about social science and the law topics, including jury damage awards. Her books include *Business on Trial: The Civil Jury and Corporate Responsibility* (2000); *The Jury System: Contemporary Scholarship* (2006) and *Judging the Jury* (1986, coauthored with Neil Vidmar). She has served on the National Science Foundation's Law and Social Sciences Advisory Panel, and regularly serves as an external reviewer for National Science Foundation grant proposals. She serves on the editorial boards of *Journal of Empirical Legal Studies*; *Journal of Psychology Public Policy, and Law*; *Law and Human Behavior*; *Law and Policy*; *Law & Society Review*; and *Psychology, Crime, and Law*.

**Michael Heise**, Professor of Law at Cornell Law School, holds a J.D. from the University of Chicago and a Ph.D from Northwestern University, and specializes in empirical legal scholarship and bridging empirical methodologies, legal theory, and policy analysis. He writes in public and private law areas, including civil justice reform, punitive damages, education policy, criminal sentencing, and judicial decisionmaking. Professor Heise's teaching areas include torts, empirical methods for lawyers, insurance law, constitutional law, business torts, education law, and law and social science. Professor Heise has received numerous awards for his scholarship and teaching, including the Law & Society Association's Best Article Prize in 1999. Professor Heise has co-edited the *Journal of Empirical Legal Studies* since 2005.

**Irwin A. Horowitz** is Professor of Psychology at Oregon State University and has been Courtesy Professor of Law at the University of Oregon Knight School of Law. He

holds a Ph.D. in social psychology from Michigan State University (1966) and conducts experimental research on various legal issues including the competence of juries in both civil and criminal trials. Horowitz is co-author of *The Psychology of Law* (1984), and *Psychology of Law: Integrations and Applications* (1998). Horowitz has published numerous research articles dealing with jury performance in complex civil cases as well as research on jury nullification. These articles have been published, inter alia, in *Brooklyn Law Review*; *Law & Human Behavior*; *Journal of Applied Psychology*; *Psychology, Public Policy & Law*; and *Judicature*. He reviews research proposals for the National Science Foundation and a variety of journals, and his research has been funded over the years by a number of grants from the National Science Foundation.

**Thomas H. Koenig** is professor and chair of the department of Sociology and Anthropology at Northeastern University. His empirical studies on punitive damages have been published in a number of leading law reviews, such as *Wisconsin Law Review*, *University of Michigan Journal of Law Reform*, and *American University Law Review*, and in social science journals. He is co-author of *In Defense of Tort Law* (2001).

**Margaret Bull Kovera** is Professor of Psychology, John Jay College of Criminal Justice, and Director of the Forensic Psychology Doctoral Program at the City University of New York. She holds a Ph.D. in social psychology from the University of Minnesota (1994). She conducts empirical research on juror decision making, including how jurors award damages. Kovera has published articles in law reviews and social science journals (e.g. *Minnesota Law Review*; *Law & Human Behavior*; *Journal of Applied Psychology*). She has served on the panel that makes

funding recommendations for the Law and Social Science Program at the National Science Foundation, is the Associate Editor of Law and Human Behavior, and serves on the Editorial Board of Psychology, Public Policy, & Law. She is recipient of the Saleem Shah Award for Outstanding Early Career Contributions to the field of Psychology and Law, awarded by the American Psychology-Law Society and the American Academy of Forensic Psychology. She is President-Elect of the American Psychology-Law Society.

**Stephan Landsman** holds the Robert A. Clifford Chair in Tort Law and Social Policy at DePaul University College of Law. He is a nationally recognized expert on the jury system and served as Reporter to the American Bar Association's American Jury Project, which has rewritten the ABA's Principles for Juries and Jury Trials. He is the author of numerous books and articles, both historical and empirical, about the jury, as well as pieces on a range of other topics including the adversary system, punitive damages, human rights and the rules of evidence. His historical work on the hearsay rule was cited by Justice Rehnquist in *Crawford v. Washington*. He is a graduate of Kenyon College and Harvard Law School.

**Robert MacCoun** is Professor of Law, Professor of Public Policy, and Affiliated Professor of Psychology at the University of California at Berkeley. He holds a Ph.D. in Psychology from Michigan State University (1984). From 1985-1993, he was a Behavioral Scientist at the RAND Corporation, where he served on the staff of the Institute for Civil Justice, and in 1999 he was Visiting Professor of Public Policy at Princeton. He has over one-hundred publications, including articles in Science; Psychological Review; Psychological Bulletin; and in numerous law

reviews and law-related journals. He has served on the editorial boards of the *Law & Society Review*; *Law & Social Inquiry*; and the *Journal of Empirical Legal Studies*.

**Nancy S. Marder** is Professor of Law, Chicago-Kent School of Law. Prior to joining the Chicago-Kent faculty, Professor Marder was an associate professor of law at the University of Southern California Law School, where she taught since 1993. From 1990 to 1992, she was a law clerk to Justice John Paul Stevens of the U.S. Supreme Court. She also clerked for Judge William A. Norris on the Ninth Circuit Court of Appeals (1989-1990) and Judge Leonard B. Sand in the Southern District of New York (1989-1990). In 1987-88, Professor Marder was a litigation associate at the New York law firm of Paul, Weiss, Rifkind, Wharton & Garrison. Professor Marder has had articles published in the *Northwestern University Law Review*, *Iowa Law Review*, *Texas Law Review* and *Yale Law Journal*. She teaches Civil Procedure and a course on juries, judges and trials.

**Joanne Martin** is a Senior Research Fellow at the American Bar Foundation in Chicago, IL. She holds a J.D. from Loyola University of Chicago and an M.M. from Northwestern University's Kellogg School of Management. Her research focuses on law and public policy and the various aspects of the American civil justice system. She has written on trial courts, juries, plaintiffs' lawyers, and the politics of civil justice reform – including the areas of medical malpractice, products liability, and punitive damages. She is co-author (with Stephen Daniels) of *Civil Juries and the Politics of Reform* (Northwestern University Press, 1995), and author or co-author of numerous articles in law reviews (e.g., *Texas Law Review*; *Minnesota*

Law Review; and Wisconsin Law Review) and social science journals (e.g., Law & Policy, and Justice System Journal) focusing on law and public policy. She reviews research proposals for the National Science Foundation and is a current member of the editorial board for Law & Social Inquiry, a peer-reviewed journal.

**James T. Richardson** is Foundation Professor of Sociology and Judicial Studies at the University of Nevada, Reno, where he directs the graduate Judicial Studies degree program for trial judges, offered in conjunction with the National Judicial College and the National Council of Juvenile and Family Court Judges. He teaches a seminar, "Social and Behavioral Sciences and the Law", in the program. He has a Ph.D. in Sociology from Washington State University, as well as a J.D. from Old College, Nevada School of Law.

He has done research on the legal system, including research on jury behavior. He has published work in Law and Human Behavior; Behavioral Sciences and Law; Brigham Young University Law Review; University of Queensland Law Review; University of New South Wales Law Journal; The Justice System Journal; Judicature; and in other books and journals in the social sciences. He reviews for a number of journals in the social sciences and in law-related fields.

**Jennifer K. Robbennolt** is Professor of Law and Psychology at the University of Illinois College of Law. She holds a J.D. and a Ph.D. in social psychology from the University of Nebraska-Lincoln. Her research integrates psychology into the study of law and legal institutions, focusing primarily on legal decision-making and the use of empirical research methodology in law. Her work is

published in law reviews and social science journals such as the Michigan Law Review; the Arizona Law Review; the Brooklyn Law Review; the Journal of Empirical Legal Studies; Law and Human Behavior; the Journal of Applied Social Psychology; and Behavioral Science and the Law. She recently served as Secretary of the American Psychology-Law Society and is the chair-elect of the Association of American Law Schools (AALS) section on Law and the Social Sciences. She has reviewed research proposals for the National Science Foundation and serves on the editorial boards of Law and Human Behavior and Psychology, Public Policy, and Law.

**Mary R. Rose** is Assistant Professor of Sociology and Law at the University of Texas at Austin, where she teaches courses on social science and law as well as social psychology and research methods. Her research examines lay participation in the legal system and perceptions of justice, and she has written on a variety of jury-related topics including the effects of jury selection practices on jury representativeness, reactions to voir dire, jury damage awards, and jury innovations. She serves on the editorial boards of Law & Social Inquiry and Law & Society Review, and is a trustee of the Law & Society Association.

**Michael L. Rustad** is the Thomas F. Lambert Jr. Professor of Law and Director of the Intellectual Property Law Program at Suffolk University Law School. He was the principal investigator in nationwide studies of punitive damages in products liability and medical malpractice. He has written numerous law review articles and a treatise chapter on punitive damages. He is co-author of *In Defense of Tort Law* (New York University Press, 2001).

**Susette M. Talarico** is Albery Berry Saye Professor of American Government and Constitutional Law Emerita in the School of Public and International Affairs at the University of Georgia. Dr. Talarico also served as Meigs Distinguished Professor of Political Science and Director of Criminal Justice Studies at the University of Georgia, where she taught for twenty-nine years. Currently, she serves as academic program coordinator in political science. Among other professional accomplishments, Dr. Talarico served as editor-in-chief of Justice System Journal for five years (1999-2004).

**Martin T. Wells** has training in both statistics (Ph.D. University of California) and social science that permits informed evaluation of legal issues. For instance, he has served on four National Academy of Sciences Panels on Census 2000 and has been an ad hoc reviewer of reports and correspondence between the National Academy of Sciences and the United States Census Bureau. He has also testified before The United States House of Representatives Subcommittee on Census 2000 in regard to issues on the statistical adjustment of the differential undercount, and has served as a member of the American Statistical Association's advisory committee to The Bureau of Justice Statistics. Wells has also served as an Editor for Journal of the American Statistical Association and continues as an Associate Editor for the same journal. At Cornell University, Wells is a Professor of Social Statistics, Chair of the Department of Biological Statistics and Computational Biology, and is an Invited member of the Law School Faculty.
